1. Summary

1.1 Executive Summary

Over the past five years, the Millennium Institute for Research in Depression and Personality (MIDAP) has solidified its position as a global leader in mental health research, demonstrating significant progress in scientific productivity, international collaboration, training of young researchers, public outreach, and policy engagement. MIDAP's interdisciplinary and multi-institutional framework, supported by six host universities, has enabled impactful advancements across four main Lines of Research: bio-psycho-social mechanisms, health promotion and psychosocial prevention, psychotherapeutic interventions and change processes, and mitigation of depression chronicity.

Scientific and Technological Achievements

MIDAP's research output has expanded substantially, peaking at 143 publications in 2023. The scientific agenda has provided pioneering insights into gene-environment interactions, epigenetic mechanisms, and the impact of social determinants on depression and personality dysfunction. Key achievements include advances in personalized psychotherapy, development of digital tools for detection, prevention and treatment, and validated psychometric instruments tailored to Latin American populations. MIDAP's work on suicidality, early adversity, and longitudinal studies with nationally representative samples has informed prevention strategies and clinical practice, while high-impact publications, including a Springer book series, have showcased MIDAP's global relevance.

Networking and Collaboration

Despite pandemic challenges, MIDAP strengthened its global presence through robust international networks focused on depression heterogeneity, cultural and biological aspects of psychopathology, contemplative practices, and e-mental health. Collaborations spanned institutions in Europe, North America, Africa, and Latin America, producing joint publications, research stays, and knowledge exchange. Regional leadership was cemented via Latin American networks on psychotherapy research, emotion regulation, and early development. MIDAP also contributed to global health equity through software deployment in low-resource settings and participation in international mental health consortia.

Training and Capacity Building

From 2020 to 2024, MIDAP welcomed 159 new students, including 31 doctoral and 4 postdoctoral researchers. Across the decade, 220 students completed their studies under the supervision of MIDAP's researchers. The institute provided extensive support through research mentorship, mobility funding, and integration into international networks. Notable initiatives included the Latin American Workshops on Depression Research, increased student participation in international congresses, and continued delivery of professional development courses on suicide prevention, mindfulness, and early parenting interventions. MIDAP's graduate education activities significantly contributed to the formation of advanced human

capital in Chile and the region, with several graduates occupying relevant academic, professional, and policy positions.

Outreach and Public Engagement

MIDAP conducted 120 outreach activities and released 42 communication products between 2020 and 2024. Its digital presence grew to nearly 95,500 followers across platforms, complemented by 395 media appearances and the launch of the "Salud mental al día" podcast and radio program. The Institute developed animated educational videos in collaboration with renowned artists and implemented campaigns in Santiago's Metro (subway) system to promote emotional wellbeing. Strategic partnerships with Fundación TLP, Círculo Polar, a prominent lived-experience group in Chile, and public health stakeholders helped bridge the gap between research and community needs. MIDAP also played a key role in shaping public discourse and policy on mental health through its publications, events, and advisory roles in government workforces, advisory boards, and key positions.

Institutional Development and Sustainability

Governed by an interdisciplinary council and a dedicated management team, MIDAP remained resilient during the pandemic and ensured continuity in operations and planning. Financial support from ANID and external grants sustained its activities, despite structural funding limitations for social science research. The transition in leadership to Drs. Alex Behn and Alemka Tomicic marked a new chapter, with a strategic focus on renewal through a 10-year continuation proposal. Administrative capacity was bolstered by collaboration with host institutions and a diverse community of researchers, assistants, and professionals.

Conclusion

MIDAP's first decade culminates with a robust legacy of research excellence, regional leadership, and public impact. Through its integrated model that bridges basic science, applied research, and community engagement, MIDAP has advanced a multidisciplinary and socially conscious approach to mental health. The 2020–2024 period reflects the Institute's adaptability, productivity, and commitment to evidence-based solutions for depression and personality dysfunction. MIDAP is well-positioned to continue addressing the mental health challenges of Chile and Latin America in the decade ahead.

1.2 Resumen Ejecutivo

Durante los últimos cinco años, el Instituto Milenio para la Investigación en Depresión y Personalidad (MIDAP) ha consolidado su posición como líder mundial en investigación en salud mental, demostrando avances significativos en productividad científica, colaboración internacional, formación de jóvenes investigadores, vinculación con la sociedad y participación en el diseño de políticas públicas. La estructura interdisciplinaria y multiinstitucional de MIDAP, apoyada por seis universidades albergantes, ha permitido avances de alto impacto en cuatro líneas principales de investigación: mecanismos bio-psico-sociales, promoción de la salud y prevención psicosocial, intervenciones psicoterapéuticas y procesos de cambio, y mitigación de la cronicidad de la depresión.

Logros Científicos y Tecnológicos

La producción científica de MIDAP se ha expandido sustancialmente, alcanzando un máximo de 143 publicaciones en 2023. Su agenda científica ha aportado conocimientos pioneros sobre las interacciones gen-ambiente, los mecanismos epigenéticos y el impacto de los determinantes sociales en la depresión y la disfunción de la personalidad. Entre los logros clave se encuentran avances en psicoterapia personalizada, desarrollo de herramientas digitales para detección, prevención y tratamiento, y la validación de instrumentos psicométricos adaptados a poblaciones latinoamericanas. El trabajo de MIDAP sobre suicidabilidad, adversidad temprana y estudios longitudinales con muestras representativas a nivel nacional ha informado estrategias preventivas y la práctica clínica, mientras que sus publicaciones de alto impacto, incluyendo una serie de libros con Springer, han reforzado su relevancia global.

Redes de Colaboración

A pesar de los desafíos impuestos por la pandemia, MIDAP fortaleció su presencia internacional mediante redes globales centradas en la heterogeneidad de la depresión, los aspectos culturales y biológicos de la psicopatología, las prácticas contemplativas y la salud mental digital. Las colaboraciones abarcaron instituciones de Europa, Norteamérica, África y América Latina, generando publicaciones conjuntas, estadías de investigación e intercambio de conocimiento. Su liderazgo regional se consolidó a través de redes latinoamericanas de investigación en psicoterapia, regulación emocional y desarrollo temprano. MIDAP también contribuyó a la equidad en salud mental global mediante la implementación de software en contextos de bajos recursos y la participación en consorcios internacionales.

Formación y Construcción de Capacidades

Entre 2020 y 2024, MIDAP acogió a 159 nuevos estudiantes, incluidos 31 doctorandos y 4 investigadores postdoctorales. A lo largo de la década, 220 estudiantes completaron sus estudios bajo supervisión de investigadores de MIDAP. El Instituto brindó amplio apoyo mediante mentorías, financiamiento para movilidad e integración en redes internacionales. Entre las iniciativas destacadas se encuentran el IV Taller Latinoamericano de Investigación en Depresión, la creciente participación estudiantil en congresos internacionales y la oferta continua de cursos de formación profesional sobre prevención del suicidio, mindfulness e intervenciones tempranas en crianza. Las actividades formativas de MIDAP han contribuido de manera significativa a la generación de capital humano avanzado en Chile y la región, con varios egresados ocupando cargos académicos, profesionales y de política pública relevantes.

Vinculación y Proyección Pública

Entre 2020 y 2024, MIDAP realizó 120 actividades de vinculación y lanzó 42 productos comunicacionales. Su presencia digital creció hasta alcanzar cerca de 95.500 seguidores en distintas plataformas, complementada por 395 apariciones en medios y el lanzamiento del podcast y programa radial “Salud mental al día”. El Instituto desarrolló videos educativos animados en colaboración con artistas reconocidos e implementó campañas en el Metro de Santiago para promover el bienestar emocional. Alianzas estratégicas con la Fundación TLP, Círculo Polar –una destacada organización de personas con experiencia vivida– y actores clave del sistema de salud pública, contribuyeron a reducir la brecha entre investigación y necesidades comunitarias. MIDAP también desempeñó un papel clave en la configuración del

discurso público y las políticas en salud mental mediante publicaciones, eventos y asesorías en grupos de trabajo gubernamentales, comités consultivos y cargos estratégicos.

Desarrollo Institucional y Sostenibilidad

Bajo la conducción de un consejo interdisciplinario y un equipo de gestión comprometido, MIDAP mantuvo su operatividad y planificación durante la pandemia. El apoyo financiero de ANID y otros fondos externos permitió la continuidad de sus actividades, a pesar de las limitaciones estructurales del financiamiento a las ciencias sociales. La transición de liderazgo a los doctores Alex Behn y Alemka Tomicic marcó una nueva etapa, centrada estratégicamente en la renovación a través de una propuesta de continuidad por 10 años. La capacidad administrativa fue reforzada mediante la colaboración con las instituciones albergantes y una comunidad diversa de investigadores, asistentes y profesionales.

Conclusión

La primera década de MIDAP culmina con un sólido legado de excelencia científica, liderazgo regional e impacto público. A través de un modelo integrado que articula ciencia básica, investigación aplicada y compromiso comunitario, MIDAP ha promovido un enfoque multidisciplinario y socialmente consciente de la salud mental. El período 2020–2024 refleja la adaptabilidad, productividad y compromiso del Instituto con soluciones basadas en evidencia para la depresión y la disfunción de la personalidad. MIDAP está bien posicionado para continuar enfrentando los desafíos de salud mental en Chile y América Latina en la próxima década.

1.3 Brief History of the Center

MIDAP is the product of the “Psychotherapy and Change Research Group” (www.psychotherapyandchange.org) and the “Psychological Intervention and Change in Depression” Millennium Nucleus. In the context of this prior research, we tested a combination of psychological, psychosocial, and psychophysiological approaches. As a result, MIDAP’s aim is to improve our understanding of depressive disorders by extending this multidimensional view to include a more differentiated analysis of personality and all the relevant dimensions involved in these disorders. The history of the group goes as far back as 1992, when we formed the Chilean and the Latin-American chapter of the Society for Psychotherapy Research (SPR). Before earning the grant that originated MIDAP, the group created the Chilean Congress of Psychotherapy (2000), whose objective is to disseminate research in psychotherapy among young psychologists and psychiatrists. Subsequently, it founded the PhD in Psychotherapy (2007), a joint program between the University of Chile, the Pontificia Universidad Católica de Chile, and the University of Heidelberg (Germany). During all these years, we have established extensive international links that have been decisive in the development of MIDAP. In these nine years, MIDAP has extended its scientific interests beyond psychotherapy to become a research center of national and regional importance in mental health research. The emphasis on the multidimensional study of depression has led us to understand it as a complex phenomenon and, thus, as one with huge phenotypic heterogeneity and an etiology that ranges from genetics to socio-economic conditions and cultural context, including personality factors and epigenetics. Academic excellence is reflected in hundreds of scientific publications in high impact journals and numerous books. Our scientific collaboration networks span five continents

and we have developed an extensive scientific dissemination work in social media and outreach events. Equally important is MIDAP's contribution to the training of advanced human capital, with the number of young undergraduate and postgraduate students who have benefited from MIDAP growing every year. MIDAP has ended its first 10 years of operation, and throughout the years, we have received excellent evaluations from our international peers.

1.4 Outstanding Achievements

Over the past five years, MIDAP has successfully navigated complex national and global crises—social upheaval, a pandemic, and political transition—while strengthening its role as a leading center for mental health research in Chile and Latin America.

Scientific Excellence Across Four Lines of Research

- **Line 1: Basic Bio-Psycho-Social Structures and Processes**

MIDAP advanced a multidimensional understanding of depression and personality dysfunction, integrating genetic, epigenetic, neurobiological, psychological, and social determinants. Landmark findings showed how early adversity alters gene expression and increases vulnerability to mental illness, with psychotherapy potentially reversing some of these effects. Studies identified key risk factors for suicidality, developed culturally adapted assessment tools, and innovated digital instruments like MHIRA. Longitudinal research emphasized the role of inequality, discrimination, and trauma in shaping mental health outcomes, particularly for women and Indigenous populations.

- **Line 2: Health Promotion and Psychosocial Prevention**

Research in this line focused on early interventions across the lifespan, with notable advances in digital tools to support university students, mindfulness programs in schools, and parenting interventions in public health contexts. Studies highlighted risk factors among caregivers of people with dementia, developed culturally appropriate video-feedback programs, and produced the first nationally representative data on childhood maltreatment. These efforts have influenced both policy and public mental health programming.

- **Line 3: Psychotherapeutic Interventions and Change Processes**

MIDAP contributed substantially to understanding therapeutic change mechanisms, especially in depression and borderline personality disorder. Process-outcome studies confirmed the importance of therapeutic alliance and rupture repair, while personalized and digital approaches were explored through machine learning and remote therapy adaptations. Noteworthy studies addressed therapy for children, trauma survivors, and LGBTQ+ individuals, emphasizing inclusivity, patient experience, and long-term transformation beyond symptom relief.

- **Line 4: Mitigation of Depression Chronicity**

Research explored how early adversity, stigma, and structural factors contribute to chronic depression. Collaborative studies investigated the impact of digital therapies, co-morbid chronic illnesses, and poverty. Though the smallest line, it produced relevant policy insights and highlighted the importance of integrating mental and physical healthcare, early trauma screening, and long-term follow-up.

Scientific Output and Knowledge Translation

MIDAP published hundreds of peer-reviewed articles and several books from 2020 to 2024, with increasing productivity and consistent international collaboration. Notable volumes include three books published by Springer-Nature in alliance with MIDAP about research conducted in Lines 1 and 2 mainly. Dissemination expanded through podcasts, open-access publications, and high-impact partnerships with *CIPER Académico*.

Leadership, Recognition, and Capacity Building

MIDAP organized major international events—including four Latin American research workshops—and participated in the design of Chile’s 2021–2030 National Health Plan. Researchers received prestigious awards from ISBD, WHO, SPR, and more. Scientific outreach included over 600 congress presentations, with strong student involvement. The launch of a CORFO-funded Technological Institute in 2023 reflected a new phase of innovation in social well-being and sustainability.

Innovation and Social Impact

In 2023, MIDAP began leading a CORFO-funded initiative to develop a Technological Institute for Public Innovation in Social Coexistence and Sustainability. This bold step reflects MIDAP’s commitment to understanding and shaping the social determinants of mental health through a multidisciplinary lens that integrates neuroscience, psychology, and social science.

Future perspectives

MIDAP is preparing for a new 10-year cycle, emphasizing translational research that bridges mechanisms and interventions. Priorities include strengthening digital tools, reducing stigma, and integrating findings into public systems to promote equity, access, and resilience across diverse populations.

2. Introduction

This introduction provides an overview of MIDAP's origins and development, research structure and main Lines of Research, and contributions to scientific knowledge, researcher training, and public engagement from 2020 to 2024. It also describes the institute's internal organization and outlines its interdisciplinary and collaborative approach to advancing mental health.

a) Description of the Institute:

The Millennium Institute for Research in Depression and Personality (MIDAP) is a multidisciplinary research center focused on depression and personality dysfunction, dedicated to advancing scientific knowledge and improving mental health disorders. This comprehensive approach aims to enhance understanding of depression and personality, particularly in vulnerable groups and diverse cultural settings.

Five years after its quinquennial renewal, MIDAP has strengthened its position as a leader in mental health research. The institute comprises over 180 researchers, students, and collaborators from six Chilean universities: Pontificia Universidad Católica de Chile (PUC), Universidad de Chile (UCH), Universidad Diego Portales (UDP), Universidad del Desarrollo (UDD), Universidad de la Frontera (UFRO), and Universidad de Valparaíso (UV). MIDAP also maintains a robust international presence, collaborating with researchers and institutions worldwide to enhance its scientific and social impact.

MIDAP uses a multidisciplinary approach to create an empirical model for understanding and addressing depression and personality dysfunctions. It explores the links between mental health and human development, taking into account various developmental, cognitive, emotional, behavioral, psychophysiological, and genetic factors. The research includes a variety of methods, such as cross-sectional, longitudinal, experimental, and naturalistic designs, along with both quantitative and qualitative approaches.

In 2020-2024, MIDAP expanded its research agenda and strengthened its four main Lines of Research. These lines address the biological, psychological, and social mechanisms underlying depression and personality dysfunctions.

b) Impact of MIDAP's Research:

The 2020-2024 period faced significant global challenges due to the COVID-19 pandemic, greatly affecting mental health. MIDAP documented the pandemic's psychological effects, focusing on depression, anxiety, and suicide risk, while exploring telepsychology and virtual interventions, supported by national surveys identifying mental health needs across different populations.

MIDAP's scientific contributions include research on biopsychosocial risk factors, evaluations of therapeutic interventions like mindfulness, psychodynamic therapy, dialectical behavior therapy, culturally adapted psychotherapies, and strategies aimed at adolescents, caregivers, and underrepresented groups. MIDAP also contributed to research on the chronicity of depression with a focus on early adversity, social determinants of health, and treatment continuity challenges.

MIDAP enhanced its involvement in international research on mental health, leading to impactful publications, digital interventions, and contributions to public mental health policies.

c) Lines of Research at MIDAP:

MIDAP's research program encompasses four interrelated Lines of Research, aided by interdisciplinary teams from various fields, aimed at understanding, preventing, and treating depression and genetics.

The first line, Basic Bio-Psycho-Social Structures and Processes, explores the foundational mechanisms of psychological disorders, focusing on the interaction between biological, psychological, and social factors. Topics studied include suicide risk, cyberbullying, social determinants of health, and psychophysiological processes.

The second line, Health Promotion and Psychosocial Prevention, evaluates preventive strategies already implemented to enhance psychological well-being. Projects in this line include mindfulness-based programs, family-focused interventions, and nature-based approaches to reducing stress and anxiety that have demonstrated effectiveness.

The third line, Psychotherapeutic Interventions and Change Processes, examines the mechanisms of therapeutic change and evaluates the effectiveness of various psychotherapeutic models currently in practice. Areas of emphasis include the therapeutic alliance, dialectical behavior therapy, digital interventions, and culturally adapted approaches.

The fourth line, Mitigation of Chronicity in Depression, focuses on reducing the persistence and recurrence of depressive symptoms through effective strategies. Research examines early adversity, comorbid conditions, and stigma-reduction methods that incorporate the use of virtual reality technologies.

d) Research Training:

MIDAP has significantly contributed to student training in higher education. From 2020 to 2024, it supported undergraduate, master's, and doctoral students from six associated universities, promoting interdisciplinary collaboration and research engagement.

Doctoral students have significantly influenced research at MIDAP through national and international publications, conferences, and aligned thesis projects. MIDAP has supported over 150 students with scholarships, stipends, and mentoring from associated researchers. Additionally, the Institute offers annual scientific meetings, writing workshops, and summer schools on mental health research methods and ethics to enhance critical reflection, methodological rigor, and networking for students and early-career researchers. Furthermore, it promotes mentoring and collaboration, helping former doctoral students advance as postdoctoral researchers and adjunct investigators both within MIDAP and at other institutions. MIDAP's commitment to developing talent is shown through its investment in capacity building and support for future leaders in mental health research.

e) Organization of the Research Team:

MIDAP's scientific work is led by the Council of Associate Researchers, which meets monthly for activities and strategic decisions. The Executive Committee, consisting of the Director, Deputy Director, Research Director, and Administration Director, oversees the strategic plan's execution. Each Line of Research is handled by Associate Researchers, with projects involving

Adjunct, Young, and Postdoctoral Researchers. MIDAP also includes communication and administration professionals to support research and institutional growth. Key principles are interdisciplinary collaboration, transparency, and participation.

f) Outreach and Public Engagement:

MIDAP aims to spread scientific knowledge to various audiences. From 2020 to 2024, it enhanced outreach through educational materials, public lectures, media engagements, journalist collaborations, and mental health campaigns on digital platforms.

MIDAP's researchers participated in mental health discussions, served on advisory boards, and collaborated with advocacy groups. Initiatives like the Mental Health and COVID-19 Survey and platforms like "Conversemos de Salud Mental" boosted the institute's visibility.

g) Conclusion and Future Directions:

From 2020 to 2024, MIDAP advanced scientific knowledge and influenced national mental health strategies, promoting accessible, effective interventions.

As MIDAP transitions, it remains dedicated to scientific excellence, interdisciplinary collaboration, and advocating for mental health as a human right. Through research, innovative interventions, and global partnerships, MIDAP will continue to integrate scientific knowledge into policies that improve lives in communities.

3. Scientific and technological research

a) Development and achievements of each Line of Research:

Line of Research 1 (L1): Basic structures and bio-psycho-social processes. This line of research focused on mechanisms that trigger, develop, and maintain psychological disorders, with a focus on depression and personality dysfunction. It is essential to keep in mind that MIDAP understands depression as a multi-causal, multi-level phenomenon. Thus, scientific efforts within L1 intend to evaluate all the cultural, social, developmental, and psychobiological conditions involved in depression and personality dysfunction. Over the years, Line 1 has produced significant research, necessary to inform applied research for promotion, prevention and treatment (Lines 2 and 3). Studies conducted within Line 1 have attempted to address the general research question: **Considering each specific level, how are genetic determinants, bio-markers, and psychological and interpersonal variables associated –and interact– with depressive symptomatology, clinical depression, personality dysfunction, suicidality and people's subjective well-being?**

Progress and Achievements: Over the years, the Millennium Institute for Research in Depression and Personality (MIDAP) has contributed significantly to understanding the interplay between genetic, epigenetic, and environmental factors in mental health. The institute's research has moved beyond traditional diathesis-stress models to highlight differential susceptibility, emphasizing that genetic and epigenetic mechanisms shape an individual's sensitivity to environmental influences. Studies have shown that early life adversity, such as childhood trauma, alters gene expression through epigenetic modifications like DNA methylation, which in turn increases vulnerability to mental health disorders such as depression and borderline personality disorder. One key discovery is that psychotherapy can potentially

reverse some of these epigenetic changes, particularly in genes involved in stress regulation, such as *FKBP5* and *BDNF*, offering a molecular basis for therapeutic recovery. This research underscores the dynamic nature of gene-environment interactions, where social experiences and interventions can reshape biological processes, contributing to a more nuanced understanding of mental health disorders and their treatment. The research conducted by the Millennium Institute for Research in Depression and Personality (MIDAP) has provided valuable insights into the neurobiological and psychological mechanisms underlying depression and personality functioning. From a neurobiological perspective, studies have highlighted the complex interactions between genetic, epigenetic, and environmental factors in shaping susceptibility to depression. The role of early life stress in programming long-term physiological and psychological vulnerability has been extensively documented, with findings indicating that stress-related epigenetic modifications contribute to neuroinflammation, HPA axis dysregulation, and altered neurotransmitter activity. Research has also identified the impact of chronic stress on brain structures such as the hippocampus, prefrontal cortex, and amygdala, demonstrating how these alterations influence emotional regulation and cognitive functioning. Moreover, interventions such as psychotherapy and pharmacological treatments appear to modulate these neurobiological processes, potentially reversing stress-induced epigenetic changes.

On a psychological level, MIDAP's work emphasizes the interaction between personality dysfunction and depressive symptomatology, proposing an integrative functional domains perspective. This approach acknowledges that personality traits influence the onset, maintenance, and treatment response of depression, challenging the traditional categorical distinction between personality disorders and affective disorders. Research has further explored the role of stress resilience and coping strategies in modulating depression risk, indicating that social support, cognitive reappraisal, and emotion regulation strategies play a protective role. Additionally, studies on the impact of socioeconomic and cultural factors suggest that social determinants such as inequality, early adversity, and systemic stressors significantly contribute to depression prevalence, particularly among vulnerable populations. These findings collectively support a multidimensional understanding of depression that integrates biological, psychological, and social determinants, advocating for personalized and contextually adapted interventions.

Research within L1 has significantly advanced the understanding of depression and personality dysfunction from a multidimensional perspective. Studies using Ecological Momentary Assessment (EMA) have provided insights into moment-to-moment fluctuations in individuals with Borderline Personality Disorder (BPD). Research on suicidality has identified key psychological vulnerability factors, contributing to improved predictive modeling and assessment tools. Studies on the impact of discrimination and unfair treatment on obesity and mental health have revealed the mediating role of negative affect and emotional eating.

Technological innovations in mental health assessment have also been a key focus of Line 1 scientific efforts. The Mental Health Information Reporting Assistant (MHIRA), an open-source digital tool, was developed and implemented across national and international research sites. Research on problematic internet use has provided longitudinal insights into its role in the development of depressive and anxious symptoms, informing interventions for digital addiction.

The development and adaptation of psychological measurement tools have been crucial in strengthening research capacities. Several psychometric instruments were adapted and validated for the Chilean context, including tools for assessing personality dysfunction, perinatal anxiety, and help-seeking behaviors. Studies have emphasized the importance of culturally relevant assessment methods to improve mental health research and clinical interventions.

Longitudinal studies have been essential in investigating depression and social determinants of mental health. MIDAP has collaborated with large-scale longitudinal studies such as the Early Childhood Longitudinal Survey (*Encuesta Longitudinal de Primera Infancia, ELPI*), the Longitudinal Intercultural Relations Survey (*Encuesta Longitudinal de Relaciones Interculturales, ELRI*), and the Longitudinal Social Study of Chile (ELSOC). Findings indicate a high prevalence of depression, with women disproportionately affected. Research on the mediating role of social support in reducing depression among indigenous populations has informed culturally sensitive interventions.

Of note, MIDAP responded swiftly to the COVID-19 pandemic by conducting nationwide and international studies on its mental health impact. Research highlighted increased levels of psychological distress, particularly among university students, adolescents, and healthcare professionals. Studies documented the exacerbation of pre-existing mental health conditions, the role of social media addiction, and the challenges in accessing mental health services during lockdowns.

Discrepancies Between Objectives and Results: Some studies faced delays due to the COVID-19 pandemic, particularly those requiring in-person data collection such as laboratory-based studies on stress and cognitive function. While technological advancements have improved mental health assessment, implementation challenges remain in low-resource settings.

Challenges Encountered: The pandemic significantly disrupted research schedules, delaying data collection and limiting participant recruitment for laboratory-based studies. The need for international collaborations introduced logistical complexities, particularly in harmonizing assessment tools across diverse populations. The integration of digital tools in clinical settings has faced resistance due to institutional constraints and the need for further validation. Funding also posed a significant challenge. As one of the first Millennium Institutes in the Social Sciences, funding was significantly lower than for centers in the mathematical and natural sciences. As a result, very little funding was available for actual research after operational costs were covered. This is particularly challenging for neurobiological and experimental research. Thus, our scientists had to apply for and secure external funding to conduct research.

Collaborative Work with Other Research Groups: MIDAP has expanded international collaborations, particularly in research on BPD, digital mental health tools, and suicide prevention with multiple networks within Latin America and in Europe. For example, partnerships with researchers from Switzerland, Kosovo, and Tanzania have facilitated cross-cultural validation of psychological instruments and clinical software development. Collaborative efforts with institutions in Latin America have contributed to studies on social determinants of mental health and stigma reduction.

Future Challenges and Research Directions: We have applied for continuous funding for MIDAP. In case of a successful application, in the renewal grant we will focus on psychological and neurobiological mechanisms that translate social and contextual determinants into adverse mental health outcomes. Based on this research, we will further develop and test interventions for the promotion of well-being, the prevention of mental illness, and the treatment of mental health disorders with a focus on depression and personality dysfunction. Line 1 is thus crucial for our continuity project. Strengthening interventions to reduce stigma and improve help-seeking behaviors in vulnerable populations will also be a priority as well as increasing access and coverage by enhancing digital mental health tools and their integration into public healthcare systems. MIDAP will also continue longitudinal research to understand the evolving impact of social determinants on mental health.

Conclusion: Research within Line 1 has significantly advanced the understanding of depression and personality dysfunction by integrating genetic, neurobiological, psychological, and social determinants, with a strong emphasis on the profound impact of social conditions. Findings reinforce the view that depression is a multi-causal phenomenon shaped not only by early-life adversity and epigenetic modifications but also by systemic inequalities, discrimination, and chronic stressors that disproportionately affect vulnerable populations. Longitudinal studies have highlighted the heightened prevalence of depression among women and indigenous communities, underscoring the critical role of social determinants such as poverty, stigma, and limited access to mental health care. Research on suicidality has enhanced predictive modeling, while studies on discrimination have linked unfair treatment to adverse mental health outcomes through mechanisms like emotional dysregulation and stress-induced neuroinflammation. The development of culturally adapted psychometric tools and digital mental health innovations, such as MHIRA, has improved assessment and intervention strategies, aiming to bridge gaps in mental health equity. MIDAP's contributions underscore the necessity of multidimensional and contextually relevant approaches to understanding and addressing mental health disorders, advocating for policies and interventions that target both individual and structural risk factors.

Line of Research 2 (L2): Health promotion and psychosocial prevention. This line of research at MIDAP focused on evaluating the effectiveness of intervention strategies aimed at changing early conditions associated with the development of depression and personality dysfunction, reducing the social exclusion of people with psychological disabilities, and enhancing the treatment capabilities of mental health professionals. Over the years, the research within L2 has spanned various populations, from children and adolescents to caregivers and older adults, emphasizing both prevention and intervention.

Progress and Achievements: The research conducted within L2 has advanced the understanding of how targeted interventions can mitigate the onset and severity of mental health conditions. A major focus has been the study of trajectories and predictors of depressive and anxious symptomatology in family caregivers of people with dementia. This long-term project has revealed significant risk factors, including social isolation and unmet psychological needs, which influence caregiver well-being. Publications emerging from this work have highlighted the importance of differentiated internet use in supporting psychological health and have examined interventions such as mindfulness to alleviate stress in older adults.

Another important area of research has been the implementation of digital interventions for mental health promotion. A mobile application designed for the early intervention of depression and anxiety in university students was developed and piloted. Findings from this project have been published in major scientific journals, indicating that digital mental health tools can significantly improve access to early intervention strategies. Expanding from university student populations, research teams have also examined disparities in access to mental health services among adolescents and identified key barriers and facilitators of help-seeking behavior.

Parenting interventions have been central to L2 research efforts, with multiple studies evaluating video-feedback interventions aimed at improving parental sensitivity and mentalization. One study examined the effectiveness of a brief internet-based video-feedback intervention to enhance parental sensitivity in depressed mothers treated in public health settings. Results suggest that digital interventions can be a cost-effective and scalable approach to supporting vulnerable parents. Another study explored the role of co-parenting among first-time parents, analyzing how task distribution and parental involvement influence long-term mental health outcomes for both parents and children. Research teams have also contributed to knowledge on perinatal depression, with studies investigating the psychological effects of the transition to parenthood and developing targeted interventions to reduce stress and anxiety in this population.

School-based interventions have also been a major focus, particularly in the area of mindfulness-based prevention programs for adolescents. Studies have provided strong evidence supporting the use of mindfulness to prevent depression and anxiety in students, with findings suggesting that individual baseline mindfulness scores can influence intervention outcomes. Additional research has explored nature-based interventions, such as forest bathing, as a means of reducing anxiety in young people.

In the last two years of scientific work, MIDAP partnered with Centro Cuida to study the prevalence and impact of early adverse experiences. This yielded the first representative data sets that show how widespread early life maltreatment and abuse is in Chile, raising important research questions and policy challenges.

Discrepancies Between Objectives and Results: While many projects have successfully met their intended objectives, some encountered challenges in data collection and implementation. The COVID-19 pandemic significantly affected the timeline of various studies, delaying recruitment and in-person interventions. Although digital interventions were quickly adapted to overcome these limitations, certain projects requiring face-to-face interaction faced unavoidable setbacks. Additionally, while video-feedback interventions demonstrated promising results, technical difficulties and participant adherence presented challenges that required further refinement of implementation strategies. The same funding problems indicated above are also true for research within Line 2.

Challenges Encountered: The implementation of mental health interventions, particularly in public health and educational settings, has faced structural and logistical barriers. Resistance to digital mental health tools among certain populations has necessitated additional efforts to improve accessibility and engagement. The pandemic further complicated research execution, particularly for studies involving caregiving populations who experienced heightened stress and caregiving demands during lockdowns. Additionally, ensuring the long-term sustainability of

digital mental health interventions remains a challenge, as many require ongoing technical support and financial resources to maintain effectiveness beyond the research setting.

Collaborative Work with Other Research Groups: Line 2 research has benefited from strong international collaborations, particularly in the areas of digital mental health, parenting interventions, and dementia caregiving. Researchers have worked with international teams from Europe and Latin America to validate intervention models across diverse cultural contexts. Contributions to global discussions on mental health prevention strategies have been formalized in collaborative book chapters and international publications, strengthening MIDAP's role in shaping evidence-based mental health interventions worldwide.

Future Challenges and Research Directions: Future research in L2 will continue to refine and expand existing interventions while exploring new areas of mental health promotion. Scaling up successful digital interventions to reach broader populations remains a key objective. Researchers will also work toward strengthening interventions targeting early childhood mental health, with a focus on parental training and support mechanisms. Additional efforts will be directed at investigating the long-term impact of school-based mindfulness programs and developing strategies to integrate these interventions into public education systems.

Another critical research direction will be addressing the mental health needs of vulnerable populations, particularly caregivers, older adults, and individuals experiencing socio-economic disadvantages. Future studies will aim to develop culturally relevant, accessible interventions that can be integrated into public mental health frameworks. Researchers will also focus on improving intervention personalization by leveraging advancements in artificial intelligence and data-driven mental health support.

Conclusion: Line of Research 2 has made substantial contributions to the fields of mental health promotion and psychosocial prevention. By integrating digital interventions, parenting programs, school-based mindfulness initiatives, and caregiver support strategies, MIDAP has advanced evidence-based approaches to reducing mental health risks across the lifespan. Despite challenges posed by the COVID-19 pandemic and structural barriers to implementation, researchers have adapted methodologies and expanded collaborations to enhance the impact of mental health interventions. Future work will focus on ensuring the sustainability and scalability of these interventions to improve mental health outcomes for diverse populations in Chile and beyond.

Line of Research 3 (L3): Psychotherapeutic interventions and change processes. This line of research at MIDAP focuses on the study of psychotherapeutic interventions and the underlying mechanisms of change in psychotherapy. This research examines the characteristics of patients, therapists, and therapeutic models that contribute to therapeutic success, as well as the interactions between patient profiles, process variables, and psychotherapeutic outcomes. The research conducted within L3 aims to provide empirical evidence to improve psychotherapeutic practice by refining intervention models, identifying effective therapeutic techniques, and understanding the relational and cognitive mechanisms that facilitate change. This report summarizes key findings, progress, and challenges encountered between 2020 and 2023.

Progress and Achievements: L3 research has made significant contributions to understanding the mechanisms of therapeutic change. Studies have investigated the role of the therapeutic alliance in psychotherapy, including the resolution of alliance ruptures and their impact on treatment outcomes. Research has also examined patient and therapist characteristics that influence psychotherapeutic change, particularly in the treatment of depression and borderline personality disorder. One major study explored the effectiveness of a brief Dialectical Behavior Therapy (DBT) skills training group for Borderline Personality Disorder (BPD) in a public outpatient setting, employing a multiple-baseline design. Findings from this study were presented at international conferences and have provided insights into the use of DBT in low-resource clinical environments.

Process-outcome research in psychotherapy has highlighted key mechanisms underlying treatment effectiveness and the factors that influence patient outcomes. A major finding is the central role of the therapeutic alliance, with studies demonstrating that improvements in alliance quality are associated with symptom reduction in early therapy sessions, creating a reciprocal and reinforcing process of therapeutic change. Research has also emphasized the importance of addressing therapy ruptures and repair strategies, showing that resolving relational tensions between therapist and patient contributes to better outcomes. Additionally, studies have explored personalization in psychotherapy, with machine learning models predicting which patients are at risk of non-response to treatment, particularly in under-resourced settings, offering pathways for more tailored interventions.

Another key focus has been the impact of digital interventions in psychotherapy, with mixed findings. While internet-based interventions promise increased accessibility, research indicates that engagement remains a challenge, as many patients struggle with adherence when digital programs lack a sense of human connection. Process research has also examined the lived experience of therapy, with qualitative studies indicating that recovery is perceived as a process of self-transformation, emphasizing personal agency and meaning-making beyond symptom reduction. Finally, the pandemic has significantly influenced psychotherapy practices, with Latin American therapists reporting both challenges and adaptations in their clinical work, highlighting the resilience and flexibility required in remote therapy settings. These findings underscore the complexity of psychotherapy processes and the need for integrative, personalized, and context-sensitive approaches to enhance treatment effectiveness.

Additional research has focused on the therapeutic process in psychotherapy with children and adolescents, particularly in cases involving trauma and sexual abuse. Studies have examined the subjective experiences of children undergoing psychotherapy, emphasizing the importance of the therapeutic alliance, play, and open discussion of traumatic experiences in fostering change. Research teams have also analyzed the impact of early life maltreatment on therapy processes, integrating the perspectives of children, parents, and therapists in a comprehensive model of psychotherapeutic change.

Research on psychotherapy for LGBTQ+ individuals has expanded, contributing to the development of culturally competent treatment models. One study examined internalized stigma and its relationship with mental health and help-seeking behaviors, while another focused on affirmative psychotherapy practices for transgender and gender-nonconforming

individuals. These findings have informed guidelines for inclusive and effective psychotherapy for LGBTQ+ populations, culminating in the publication of a book on psychotherapy and mental health in gender and sexually diverse persons.

Process-based research has continued to explore the role of dynamic systems in psychotherapy. Studies have examined relational patterns, conflict resolution, and personality functioning in the context of psychotherapeutic change. Findings from these studies have contributed to understanding how different psychodynamic focuses interact with therapeutic outcomes. Additionally, research on epigenetic mechanisms in psychotherapy has investigated how DNA methylation and mentalization changes occur during treatment, shedding light on the biological underpinnings of therapeutic change.

Discrepancies Between Objectives and Results: While many research objectives were successfully met, some studies encountered limitations. Recruitment challenges, particularly during the COVID-19 pandemic, affected sample sizes and delayed data collection. For example, a study on the therapeutic alliance in psychotherapy with depressed patients faced difficulties in recruiting participants across multiple clinical centers. Similarly, efforts to implement a computer-assisted cognitive-behavioral therapy intervention for adolescents with depression encountered issues related to participant engagement and adherence.

Challenges Encountered: Structural and logistical barriers posed significant challenges to the implementation of psychotherapy research. The transition to online therapy during the pandemic required adaptation of research protocols and assessment methods. Some studies faced difficulties in retaining participants, particularly in digital interventions. Additionally, while the development of psychotherapeutic models for LGBTQ+ individuals and children exposed to trauma has been a priority, translating research findings into widely accessible clinical practices remains an ongoing challenge.

Collaborative Work with Other Research Groups: L3 research has benefited from extensive national and international collaborations. Partnerships with research institutions in Latin America, Europe, and North America have facilitated cross-cultural studies on psychotherapy processes. Collaborative efforts have also contributed to major publications, including books and journal articles on psychotherapy process research, LGBTQ+ mental health, and trauma-informed interventions. MIDAP researchers have played a leading role in discussions on psychotherapy integration, bridging different theoretical perspectives and empirical methodologies to advance the field.

Future Challenges and Research Directions: Future research in L3 will focus on refining psychotherapeutic interventions and expanding access to evidence-based treatments. Researchers will work toward integrating findings from process-based research into clinical training programs to improve therapy outcomes. Further exploration of the role of digital interventions in psychotherapy will be a priority, particularly in enhancing engagement and adherence in online therapy programs. Another critical direction will be investigating the long-term effects of psychotherapy on mental health and well-being, with a focus on sustaining therapeutic gains beyond the treatment period.

An emphasis will also be placed on improving psychotherapy models for marginalized populations, including individuals affected by trauma, LGBTQ+ patients, and individuals with personality disorders. Future research will continue to explore how relational and biological factors interact in psychotherapy, leveraging advancements in neuroscience and psychodynamic research to refine treatment approaches.

Conclusion: Line of Research 3 has made substantial contributions to the understanding of psychotherapeutic interventions and change processes. Through studies on the therapeutic alliance, psychotherapy for trauma-exposed individuals, and digital mental health interventions, MIDAP researchers have provided valuable insights into the mechanisms of therapeutic change. Despite challenges related to recruitment, digital adaptation, and clinical translation, research teams have expanded collaborations and developed innovative approaches to improve psychotherapy effectiveness. Future efforts will focus on ensuring that research findings are translated into practice, ultimately enhancing the accessibility and impact of psychotherapeutic interventions in diverse populations.

Line of Research 4 (L4): Mitigation of Chronicity in the Course of Depression. This line of research at MIDAP focuses on understanding and mitigating the chronicity and recurrence of depression, aiming to enhance patient recovery and reduce long-term burden. This research examines key post-treatment factors associated with decreased relapse rates and characterizes patients with recurrent and complex depression, particularly those with comorbid personality dysfunction. Through targeted interventions and longitudinal studies, L4 aims to improve treatment strategies and inform policies that reduce the societal and individual impact of chronic depression. This report summarizes key findings, progress, and challenges encountered between 2020 and 2023.

Progress and Achievements: L4 research has significantly contributed to understanding chronic depression by exploring the role of chronic health conditions in treatment response and designing interventions tailored to at-risk populations. One major ongoing study, a collaborative computer-assisted cognitive-behavioral intervention for depressed patients with chronic diseases in primary care, has continued data collection and is expected to provide insights into optimizing mental health care for individuals with coexisting physical and psychological conditions.

Findings from L4 studies have highlighted the importance of social and structural factors in chronic depression. Research on early adverse childhood experiences has identified their strong predictive role in severe and recurrent depression, as well as their association with higher suicide risk and psychiatric admissions. Additional studies have examined the impact of childhood maltreatment on long-term mental health, stressing the need for early interventions to mitigate chronicity.

Efforts to enhance treatment accessibility and effectiveness have been reflected in multiple studies. One study investigated stigma as a barrier to treatment, particularly in autism spectrum disorder, while another assessed the effectiveness of virtual reality interventions in reducing mental health stigma. Research has also explored the role of internet-based interventions in preventing depression recurrence, offering valuable insights into the digital mental health landscape. Moreover, multisite international collaborations have examined poverty alleviation

programs and their potential role in reducing mental health chronicity, highlighting broader socioeconomic determinants of mental health.

Discrepancies Between Objectives and Results: Although significant progress has been made in understanding chronic depression, some studies encountered limitations. The implementation of certain intervention strategies, particularly digital and collaborative care models, has faced challenges in participant engagement and retention. The COVID-19 pandemic also disrupted data collection and delayed recruitment efforts, particularly for in-person interventions. While the integration of technology in treatment has shown promise, issues related to accessibility and adherence remain areas for further research and refinement.

Challenges Encountered: Structural and systemic barriers to treating chronic depression remain a major challenge. Many studies have highlighted the need for personalized and integrated care models that consider both psychological and medical comorbidities. However, implementing these models within existing healthcare structures has proven complex. Additionally, studies on childhood maltreatment and trauma have encountered ethical and logistical challenges in recruitment and data collection. The development of digital interventions for depression recurrence prevention has also faced hurdles in ensuring sustained engagement and usability for diverse patient populations. Over the years, MIDAP researchers have not conducted an increasing amount of research within Line 4, thus, it remains weaker than the rest.

Collaborative Work with Other Research Groups: L4 research has benefited from strong international collaborations, particularly in multisite studies on depression chronicity, childhood maltreatment, and poverty-related mental health interventions. Cross-national studies have examined treatment access disparities and the long-term effects of early life adversity. Collaborations with public health institutions have contributed to policy recommendations for improving care for individuals with recurrent depression. Additionally, partnerships with researchers in global mental health have led to studies on deinstitutionalization and its effects on psychiatric illness chronicity.

Future Challenges and Research Directions: Future research in L4 will focus on refining interventions aimed at preventing depression recurrence and promoting long-term recovery. Expanding digital interventions, particularly those targeting at-risk populations, remains a key objective. Research will continue exploring how social determinants such as poverty and childhood adversity contribute to chronic depression, informing strategies for targeted prevention.

Further efforts will be directed at improving integrated care models that bridge the gap between mental health and primary care. Longitudinal studies will be expanded to assess the long-term effects of early interventions, ensuring sustainable mental health outcomes. Additionally, researchers will work towards improving stigma-reduction interventions to enhance treatment accessibility and adherence.

Conclusion: Line of Research 4 has made contributions to understanding and mitigating the chronicity of depression. By integrating findings on early life adversity, social determinants, and treatment effectiveness, MIDAP researchers have advanced evidence-based approaches for

long-term depression management. Despite challenges in implementation and recruitment, L4 research has informed innovative intervention models and policy recommendations. Future efforts will focus on sustaining and scaling up successful interventions to improve mental health outcomes for individuals with chronic and recurrent depression.

b) Productivity:

MIDAP's scientific productivity from 2020 to 2024 has shown consistent growth, with a peak in 2023 (143 publications) and sustained high levels in 2021, 2022 (both 109), and 2024 (122). This increase reflects the maturation of large research projects, the addition of new young researchers, and strategic collaborations. Indexed journal publications in ISI/WoS or similar journals have ranged between 49.6% (2023) and 68% (2021–2022), hitting 56% in 2024. Scopus-indexed publications have fluctuated, reaching 17% in 2024. MIDAP has prioritized high-impact publications, with many appearing in journals with impact factors between 0.33 and 5.811. Publications in Q1 journals have varied from 22% (2020) to 43% (2021–2022), dipping to 32.4% in 2023 and 23.7% in 2024, while Q2 publications have remained significant, ranging from 17.2% (2024) to 31% (2020). Over the years, there has been variability in the proportion of Q3 and Q4 journal publications, reflecting an emphasis on targeting higher-tier journals where possible. Research output by line of research has been led by L1 (Basic bio-psycho-social structures and processes), consistently accounting for 44–49% of publications, followed by L2 (Health promotion and psychosocial prevention), which has grown from 19% in 2020 to 31.1% in 2024. L3 (Psychotherapeutic interventions and change mechanisms) has remained stable at 19.6–24%, while L4 (Mitigation of chronicity in depression) has consistently had the lowest number of publications (4–13%). Collaboration and authorship patterns show that while single-author publications by MIDAP researchers remain common (ranging from 40 to 81 per year), efforts toward more collaborative work continue. The proportion of publications involving two or more MIDAP researchers has ranged from 42% in 2020 to 40% in 2023, indicating ongoing internal collaboration. The number of student co-authored publications has fluctuated, with 23% in 2024, up from 13 publications in 2020 and 16 in 2023, emphasizing the need for further student integration in research. MIDAP's research productivity over these years has been characterized by sustained scientific output, a strong presence in indexed journals, and growing interdisciplinary collaboration. While high-impact publishing remains a priority, improvements in student engagement and collaborative authorship can further enhance research impact. With new projects receiving grants, the institute is well-positioned to maintain and strengthen its scientific contributions in the coming years.

Regarding open access, throughout the years, MIDAP maintained the position reported in 2017 regarding “open access” publications. Some of these journals are of high quality (for example *Frontiers in Psychology* or *PLOS One*), they have rigorous peer-review procedures, and high-quality output with high dissemination, because there are no costs associated with access to articles. The cost of publication continues to be a difficulty for our researchers, particularly because Chilean researchers typically do not qualify for standard discounts given the development level of the country.

c) Outstanding publications:

Between 2020 and 2024, MIDAP researchers have produced several outstanding publications that have significantly contributed to the understanding of mental health, psychotherapy, and social determinants of mental illness. The following publications are particularly important:

- In 2021, MIDAP expanded its impact by publishing the book *Depression and Personality Dysfunction: Towards the Understanding of Complex Depression*, edited by Springer. Representing a significant contribution to the study of comorbid personality pathology and depression, this is a particularly important publication because it summarizes significant research conducted by MIDAP researchers and collaborators.
- In 2022, MIDAP continued its Springer book series with *Etiopathogenic Theories and Models in Depression and Prevention and Early Treatment of Depression Through the Life Course*. Again, this is an important publication because it also summarizes significant research conducted by MIDAP regarding disease mechanisms and models of depression.
- In 2023, a third Springer book was published, this time focusing on Line 2 research on prevention and promotion. The book, entitled *Prevention and Early Treatment of Depression Throughout the Life Course*, is very important because it summarizes Line 2 research on prevention and promotion.
- Regarding line of research 3, the publication Krause, M. (2024). Lessons from ten years of psychotherapy process research. *Psychotherapy research*, 34(3), 261-275, is particularly important because it was based upon Dr. Krause's presidential address at the Society for Psychotherapy Research and summarizes a decade of psychotherapy process research with a specific focus on research conducted at MIDAP since its origin.
- In 2023, the book *Mental Health and Society in Times of Crisis* compiled essays from MIDAP researchers that were particularly relevant to understand the relationship between mental health on the process of social unrest that affected Chile in 2019.

d) Congress presentations

Between 2020 and 2024, MIDAP researchers delivered a total of **609 congress presentations**, reflecting a steady increase over time. In 2020, the number of presentations dropped to **56**, largely due to the COVID-19 pandemic, with **68% of them presented in international venues**. In 2021, as travel restrictions eased, presentations rose to **104**, marking an **85% increase**, with **80% of them delivered internationally**. The upward trend continued in 2022, reaching **138 presentations**, a **33% increase** from the previous year, with **58% presented in international venues**. In 2023, presentations surged to **189**, maintaining a strong international presence with **44% of presentations abroad**. In 2024, **122 presentations** were delivered, with **56% taking place at international conferences and 43% at national conferences**. The distribution of presentations across MIDAP's Lines of Research has remained relatively stable, with **L1 (Basic bio-psycho-social structures and processes)** and **L3 (Psychotherapeutic interventions and change mechanisms)** being the most active areas. In 2020, **L1 accounted for 41%**, **L3 for 38%**, **L2 for 11%**, and **L4 for 11%**. In 2021, **L1 and L3 remained dominant**, each contributing **28%**, while **L2 rose to 28%**. In 2022, **L3 accounted for the highest proportion (46%)**, followed by **L1 (28%)** and **L2 (17%)**, with a few shared presentations across these categories. In 2023, **L3 presentations peaked at 85**, making up nearly **45% of all presentations**, while **L1 accounted for 53 presentations (28%)**, and **L2 for 31 (16%)**. In 2024, the trend persisted, with **L1 and L3 together representing nearly 70% of all presentations**. Student participation has been a key focus, with an increasing proportion of congress

presentations including MIDAP students. In 2021, **35% of presentations involved students, with about half of them as first authors**. This trend remained strong in 2022 and 2023, with **33–34% of presentations featuring students**, and a growing number of them leading the presentations, reinforcing the institute's commitment to capacity-building. A key trend over these years is the sustained growth in research dissemination, with **a strong presence in international conferences**. The proportion of international presentations was **highest in 2021 (80%)**, decreased slightly in 2022 (58%), and stabilized at **44% in 2023 and 56% in 2024**. The fluctuation likely reflects increased participation in local conferences as in-person academic events resumed. The largest growth in presentations came from **L3, driven by MIDAP's active participation in psychotherapy research congresses**, while L1 maintained strong representation across years. Student involvement in presentations has remained significant, with a steady percentage of presentations featuring students as co-authors and lead presenters. MIDAP has demonstrated **a consistent increase in scientific dissemination**, particularly in psychotherapy research and bio-psycho-social mechanisms, while maintaining strong student engagement and a significant international presence. The variations in national vs. international participation reflect external factors such as pandemic restrictions and shifting priorities in academic dissemination strategies. The continued increase in presentations suggests a strong trajectory for future research impact.

Presentations: Summary Tables

Type of researcher	Type of presentation	2020		2021		2022		2023		2024

e) Other achievements

Patents:

Between 2020 and 2023, MIDAP researchers did not report any patents. However, in **2024**, one patent was filed for the application *Mamá, te entiendo* (License number 2024-A-3305), a digital tool designed to monitor postpartum depression symptoms.

Intellectual Property:

No intellectual property developments were reported during **2020, 2021, 2022, or 2023**.

Organization of Scientific Events:

In **2020**, the COVID-19 pandemic posed significant challenges to event organization, but MIDAP successfully adapted by using online platforms. Notable events included an **international seminar on Computer Adaptive Testing**, featuring renowned speakers from the University of Chicago, Harvard, and Universidad Católica. Additionally, MIDAP organized a **summer school on Social Relationships and Health** and a **seminar on Internet Interventions for Mental Health**, led by Dr. Carola Pérez. Another major event was a **lecture by Otto Kernberg**, co-organized with Columbia Global Center - Santiago. In 2021, MIDAP resumed in-person and hybrid events. The III Latin-American Workshop for Research in Depression and Personality, focused on depression heterogeneity, included researchers from Chile, Argentina, Colombia, the UK, and Nicaragua. MIDAP also co-organized an International Seminar on Borderline Personality Disorder in collaboration with Universidad Diego Portales and international research groups. Other notable events included a public lecture series on the new Chilean Mental Health Law (Law 21.331) and a seminar titled *Psychotherapy during the Pandemic: Experiences and Adaptations of Latin American Psychotherapists*. In 2022, no major scientific events were reported. In 2023, MIDAP organized several large-scale scientific events. In January, the institute hosted a conference on Challenges for Mental Health in Chile, featuring psychiatrist Ricardo Araya. In October, MIDAP organized a scientific seminar on Digital Mental Health: Challenges and Opportunities, held at Universidad de La Frontera in Temuco. A similar conference on Digital Mental Health: Where Are We? Where Are We Going? was hosted in Santiago. In 2024, MIDAP continued its scientific outreach with two major events. The IV Latin American Workshop for Research in Depression and Personality was held in Santiago, Chile, drawing graduate students and researchers from across Latin America. Additionally, MIDAP organized a conference on Routine Outcome Monitoring, featuring international and national presenters.

f) Scientific Editorial Boards:

MIDAP researchers have consistently contributed to prestigious scientific journals across psychiatry, psychotherapy, neuroscience, and public health. Some researchers have served on editorial boards for multiple years, while others expanded their contributions over time. In **2020**, key editorial board contributions included **Dr. Mariane Krause** (*Psychotherapy Research, Revista de Psicología Universidad de Chile, Terapia Psicológica*), **Dr. Diego Cosmelli and Jaime Silva** (*Revista Chilena de Neuropsicología*), **Dr. Guillermo de la Parra, Juan Pablo Jiménez, Jaime Silva, and Felipe Martínez** (*Gaceta de Psiquiatría Universitaria*), and **Dr. Alex Behn** (*Frontiers in Psychiatry*). **Dr. Luis Salazar** served on multiple boards, including *Drug Metabolism and Personalized Therapy* and *Clinica Chimica Acta*, while **Dr. Cristián Montenegro** was part of *Critical Public Health* and *Somatosphere: Medicine, Culture, Anthropology*. In **2021**, several researchers continued their previous editorial roles. **Dr. Cristián**

Montenegro joined the board of *PLOS Global Public Health*, while **Dr. Adam Horvath** contributed to *Journal of Clinical Psychology* and *Journal of Personality Disorders*. **Dr. Vania Martínez** joined *Revista Chilena de Psiquiatría y Neurología de la Infancia y Adolescencia*, and **Dr. Javiera Duarte** joined *Terapia Psicológica*. In **2022**, MIDAP researchers maintained a strong editorial presence. **Drs. Mariane Krause, Jaime Silva, Alemka Tomicic, and Javiera Duarte** served on *Terapia Psicológica*, and **Dr. Diego Cosmelli** joined *Topics in Cognitive Science (topiCS)*. **Drs. Diego Cosmelli and Carolina Altimir** joined *Studies in Psychology*, while **Dr. Álvaro Jiménez** became a guest editor for a special issue of *Journal of Environmental Research and Public Health*. In **2023**, most researchers continued their editorial roles, with notable additions such as **Dr. Carola Pérez** joining *Journal of Research on Adolescence*. In **2024**, editorial board contributions remained strong, with several researchers maintaining their roles. **Dr. Mariane Krause** continued on *Psychotherapy Research* and *Terapia Psicológica*, while **Dr. Diego Cosmelli** served on *Revista Chilena de Neuropsicología*, *Studies in Psychology*, and *Topics in Cognitive Science (topiCS)*. **Dr. Cristián Montenegro** expanded his role by serving on the *Journal of Critical Public Health (JCPH)* and *Somatosphere: Science, Medicine, Anthropology*.

g) Awards:

In **2020**, **Dr. Vania Martínez** received the *Todo Mejora* Award for her contributions to LGBTQ+ youth mental health. She and **doctoral student Marcelo Crockett** won the Best Paper Award at the **Chilean Society for Neurology, Psychiatry, and Neurosurgery Annual Conference** for research on **depression, suicidal ideation, and substance abuse among LGBTQ+ youth in Chile**. **Dr. Paul Vöhringer** received the *Klerman Young Researcher Award* from the **Depression and Bipolar Support Alliance**. In **2021**, **Dr. Graciela Rojas** received an *Academic Trajectory Award* from the **Medical College of Chile**. **Dr. Claudia Miranda** was recognized by **Universidad Andrés Bello** for her contributions to mental health research. In **2022**, **Dr. Yamil Quevedo** received two **Travel Awards** from the **International Society of Substance Use Professionals (ISSUP)** and the **Society for Psychotherapy Research (SPR)** to present his research at international conferences. **Dr. Ulises Ríos** won the prestigious *Samuel Gershon Junior Investigator Award* from the **International Society of Bipolar Disorders (ISBD)** for his research on **gene-environment interactions in social cognition among bipolar patients**. In **2023**, **Dr. Juan Pablo Jiménez** was named **Emeritus Professor of Psychiatry** at **Universidad de Chile**. **Dr. Cristián Montenegro** received the *Above and Beyond Silver Award* from the **University of Exeter**, along with a **Career Development Award** from the **Wellcome Trust**. **Dr. Matías Irrázaval** received the *WHO Director-General's Excellence Award* for his work on the **Special Mental Health Initiative** at the **World Health Organization**. **Dr. Mariane Krause** received the *Senior Distinguished Research Career Award* at the **Society for Psychotherapy Research (SPR) International Conference**. In **2024**, **Dr. Alex Behn** received the *Premio Alumni UDP 2024* from **Universidad Diego Portales** for his contributions to mental health research. **Dr. Luis Antonio Salazar Navarrete** won the *Premio Mejor Trabajo* [Best Work Award] at the *2nd Symposium on Translational Medicine* and placed **third** in the *Área Medicina y Ciencia* [Medicine and Science Area] oral presentation competition at **Universidad de La Frontera**. **Dr. Claudia Capella** received the *Best Poster Award* at the **ACET Congress**, and **Dr. Pablo Martínez Díaz** was awarded a prestigious **CIHR Fellowship** from the **Canadian Institutes of Health Research**. Between **2020 and 2024**, MIDAP

researchers have demonstrated excellence in **scientific leadership, editorial contributions, and international recognition**. The Institute has expanded its influence through **high-profile scientific events, growing participation in editorial boards, and prestigious awards recognizing outstanding contributions to mental health research**.

4. Education and Capacity Building

a) Education, Training and Capacity Building

MIDAP is a renowned research center that generates a high level of interest among young people who are receiving training in multiple areas of research linked to mood and personality disorders and other fields where the Institute operates. Like every year, a relevant number of undergraduate and graduate students enrolled in the various programs offered by the host universities –e.g. psychology, clinical psychology, psychotherapy, neuroscience–asked to join MIDAP during 2024 to produce their theses with MIDAP researchers working on their subjects of interest (see next table).

	2020	2021	2022	2023	2024	Total
Number of new students registered in MIDAP	30	28	43	22	36	159

In the period 2020-2024, there were 159 new students registered in MIDAP. Of them, the Institute has hosted 11 undergraduate students, 21 master's students, 31 doctoral students, and 4 Postdoctoral Researchers (PR). By the year 2024, 51 Young Investigators (YI) had begun their research careers as part of MIDAP. This large overall number reflects the interest of young people in being part of MIDAP, as they consider it a center of excellence relevant to their careers. This large overall figure reflects young people's interest in joining MIDAP, since they regard it as a center of excellence relevant to their careers.

To channel this interest, there is a well-defined procedure –established when the Institute was founded and managed by the executive board–which allows students working on their theses or research assistants collaborating with our researchers to apply to join our group. Upon joining MIDAP, students begin receiving periodic information about the Institute's scientific and educational activities, apart from being encouraged to apply for a variety of funding opportunities offered by the Institute. For instance, they can get financial support to participate in scientific events* in Chile or abroad, commission translation and/or editing services for their scientific manuscripts*, fund part of their doctoral theses*, give presentations at internal meetings and seminars, and receive thesis supervision, among other uses¹. In this regard, and due to budgetary constraints, a competitive grant process has been used. In this way, several MIDAP members can attend congresses and cover expenses in the completion of doctoral theses, while other funding is freely available, such as funds for editing/translation and publication.

¹ Cases marked with an asterisk (*) are covered with funds received from ANID

To give continuity to Research Career, MIDAP has incorporated the graduates of the participating doctoral programs under the category of Collaborative Researcher. This category is used by MIDAP to designate individuals who support the Institute's scientific-technical activities but without any productivity obligations and without any direct MIDAP funding. MIDAP opens frequent promotional processes for Collaborators to enter another formal category such as Young or Adjunct Researcher –if they are interested in doing so and meet the necessary requirements. Furthermore, they are eligible for institutional sponsorship to apply for external grants, get support for paper publication, and participate in scientific events, among other opportunities.

Even though financial support is a necessity for conducting research, the MIDAP main draw is the chance to gain support for disseminating and prompting debate on their thesis results through multiple means, including supervisions, student exchange opportunities, and collaboration with mental health professionals and leading Chilean and foreign researchers. They also gain access to instruments and get the chance to present their work at one of the annual Plenary Meetings or other similar events, which extends the scope of the discussion and dissemination of their results.

MIDAP has contributed to the training of young researchers at a postdoctoral level since 2020, relies on funding received from the UCs Vice-president's Office for Research. These funds are used to grant stipend to a postdoctoral researcher conducting their research within one of MIDAP's FIP projects (internal competition for the allocation of funds to carry out research in priority areas [Priority Research Funding (FIP)] -defined by the institute in 2019). Also, the funds provided annually by the Faculty of Social Sciences and the School of Psychology UC directly benefit MIDAP doctoral students enrolled at UC, enabling them to complete short research internships at prestigious research centers abroad.

Notwithstanding the contributions mentioned above, MIDAP earmarked part of its resources during the year 2024 to benefit other graduate doctors who applied to carry out their postdoctoral research at one of the host universities. This benefit is granted for approximately 10 months and is awarded to a maximum of two doctors per year.

b) Achievements and Results:

During 2024, MIDAP added 36 new students, reaching the figure of 330 young people since its beginning. In 10 years, MIDAP hosted 76 undergraduate students, 128 master's students, and 104 doctoral students. To date, 220 students have graduated with their studies or theses under the guidance of MIDAP researchers: 59 PhDs, 104 master's degrees and 57 undergraduate degrees. Furthermore, 14 Young Researchers (YR) have been part of MIDAP during these years. This large overall figure reflects young people's interest in joining MIDAP, since they regard it as a center of excellence relevant to their careers. Detailed information in Annex 5. As usual, most doctoral students are enrolled in the Doctoral Program in Psychotherapy, jointly offered by UC and UCh. Other students are enrolled in Doctoral Programs in Psychology (UC, UCh, USACH, UDP, and UFRO), in UDEC's Doctoral Program in Mental Health, in UDD's Doctoral Program in Developmental Sciences and Psychopathology, in UC's Doctoral Program

in Neurosciences, and in Doctoral Programs in Public Health (UC and UCh). Most of MIDAP's master's students came from UC's MSc in Clinical Psychology, while the rest came from UCh's MSc in Child and Adolescent Clinical Psychology and UC's MScs in Psychology and Health Psychology.

The activities and figures related to human capital training during 2024 have helped us to continue to comply with one of our global aims: to make a decisive contribution to the generation of advanced human capital in Chile and Latin America through graduate education and post-doctoral training and collaboration with universities in master's-and undergraduate-level education.

In this context, the IV Latin American Workshop and Research in Depression, organized by MIDAP, was held, which was attended by 15 graduate students from Latin American countries such as Peru, Brazil, Uruguay, Argentina, Colombia, Ecuador and Chile. The activity lasted five days, during which thesis presentations, workshops, keynotes by guest professors and MIDAP professors, among other activities, were held. This workshop took place in October 2024.

The gradual normalcy attained after the critical stage of the COVID-19 pandemic allowed MIDAP students to start applying for internships at foreign research centers again. In this context, four doctoral students, who are affiliated with MIDAP, traveled in 2024 to other four centers to conduct part of their theses with the support of renowned foreign researchers: Dra. Lydia Kogler (Universidad de Tübingen, Alemania), Ps. Karla Espinoza (Instituto Psiquiátrico Dr. José Horwitz Barak, Chile), Dr. Daniel Quintana (University of Oslo, Noruega) and Magdalena Rivero (Universidad de Barcelona, España).

Also, six doctoral students received a small monetary grant from MIDAP aimed at supporting their thesis work.

Out of 475 studies presented at national and international conferences during 2024, 189 involved YRs and PRs as co-authors (with 45 being led by them), while 141 included student participation (with 55 of them being student-led). A total of 23 graduate students and researchers received financial support from MIDAP to cover congress registration fees, as all events were held remotely, through application processes established by MIDAP to provide such aid.

Four diploma programs directed by MIDAP's researchers requested sponsorship from the Institute in 2024. All of these programs are a fundamental part of the activities conducted by MIDAP in collaboration with other universities. The average annual enrollments for these programs ranged from 20 to 65 professionals.

- Suicidal Risk: Evaluation and Management.
- Mindfulness, Science and Health.
- Video-Feedback as an Intervention Tool in Primary Childhood.
- Suicidal Risk: Evaluation and Management.

Over the last decades, mindfulness practices have been incorporated into healthcare in order to develop new ways of approaching difficult experiences. Mindfulness practitioners cultivate greater awareness and acceptance of their experience. This new approach has resulted in the

establishment of “contemplative studies”, which have identified a number of biological correlates and mechanisms of action of contemplative practices. Recent studies have highlighted their potential in the prevention and management of depression, anxiety, and stress. In line with these recent findings, MIDAP offers this experiential and didactic course informed by the contributions of contemplative practices –mindfulness and compassion–to personal and relational well-being. The course was facilitated by Adjunct Researcher Sebastián Medeiros and was attended by 30 professionals working in the healthcare field and other related areas.

The course “Suicide Risk: Assessment and Management” was again offered during 2024 (online). The sessions, held in October, were led by Adjunct Researchers María de la Paz Maino, Claudia Moya, Cristóbal Morales. The attendees were 64 healthcare professionals and others working in related disciplines who are in contact with potentially at-risk adolescents or adults. As usual, its objective was to present effective tools for detecting, evaluating, and managing suicide risk to professionals working with people who may be susceptible to it.

The course “Early childhood video-feedback intervention” was offered again in 2024 (online). The teaching team included Associate Researcher Marcia Olhaberry, Postdoctoral Researcher Catalina Sieverson, and Collaborator Researcher Fanny Leyton. Parenting-focused interventions have been found to be among the most effective in promoting well-being and preventing difficulties during childhood. In this context, video-feedback represents an exceptional intervention tool, with numerous studies showing its impact on interaction and bond quality as well as on mental health and child development variables. The video-feedback course also seeks to improve therapists' reflective skills, allowing them to identify their own mental states and their triggers in themselves and the dyads or triads receiving care. This course was designed to provide initial theoretical and practical content for participants to understand and use video feedback when working with young children and their families. This version of the course was attended by a total of 16 young professionals.

Being an introductory course, it was aimed at mental health professionals (from the fields of clinical psychology, psychiatry, social work, and nursing) and undergraduate and graduate students from the same specialization fields with an interest in learning about the theoretical foundations and some technical principles of this therapeutic intervention model. Participants from other regions of Chile and from other countries were able to enroll in each course. This has increased MIDAP's visibility and extended the range of young public or private sector professionals wishing to learn about new tools and acquire knowledge applicable to their fields of expertise. In 2023, our courses had participants from all regions of Chile, as well as professionals from Peru, Ecuador, Mexico, Brazil, Uruguay.

At MIDAP, we consider that the role of the continuing education area is important, since the participation of professionals –most of whom belong to public healthcare entities–allows the Institute to have a large impact on their workplace tasks and activities; that is, largely based on the results of MIDAP studies, we can have a direct influence on how they conduct their work after attending our courses.

c) Destination of Students.

The situation of MIDAP students, as it relates to their destination upon completion of their studies, has not changed. Although some students who have obtained their doctoral degrees in recent years are affiliated with their universities on fixed-term contracts and without an academic position, others have gradually signed permanent contracts in different kind of Chilean institutions (e.g. public sector). In addition, many of them are still involved in clinical work, putting into practice what they learned throughout the doctoral program as well as the results of their own research. As previously explained, most of them are now associated with MIDAP as Postdoctoral Researchers or Collaborator Researchers.

5. Networking and other collaborative work

a) Networking

Overview

Between 2020 and 2024, MIDAP has continued to strengthen its international footprint, expanding collaborative efforts and fostering scientific exchanges across various research domains. Despite the challenges posed by the COVID-19 pandemic, MIDAP has successfully maintained and enhanced its international and national partnerships. These collaborations span six key areas of research:

- Depression and Personality Dysfunction
- Biological and Personality Interactions and Cultural Aspects in the Development of Psychological Disorders
- Change Processes in Psychotherapy
- Longitudinal Studies on the Development of Depression
- Mindfulness and Other Contemplative Practices
- E-Mental Health Research
- Early Developmental Conditions

1. Depression and Personality Dysfunction

The International Network for the Study of the Heterogeneity of Depression (CONICYT, PCI REDES180104) has continued to develop, with participation from researchers from the University of Sheffield, Columbia University, University of Zürich, and Donau University in Austria. The network expanded in 2022 to include data sets from Uganda and Ethiopia, facilitating comparative studies on depressive profiles at a global scale. In 2023, initial comparative analyses were presented at the SPR conference in Dublin, and a MIDAP doctoral student conducted research stays in Sheffield and Zürich. Because of this network, one of MIDAP's graduate doctoral students is currently a postdoc in Zürich.

2. Biological and Personality Interactions and Cultural Aspects in the Development of Psychological Disorders

MIDAP's young researchers have spearheaded new international networks, including the Culture and Behavior Laboratory (Universidad de la Frontera, Chile, and Loma Linda University, USA). In 2023, a UFRO student conducted a research stay at Loma Linda University. The Platform for Social Research on Mental Health in Latin America (PLASMA) has matured into a stable research hub, with active participation from Chile, Brazil, Uruguay, Argentina, Peru, Colombia, Ecuador, and Panama. Additionally, joint research on dyadic interactions and biological markers (e.g. oxytocin, cortisol) has continued between MIDAP and researchers at Heidelberg University and Concordia University in Montreal.

3. Change Processes in Psychotherapy

The “Psychotherapy and Change – Latin American Network of Psychotherapy Research” has strengthened regional ties, incorporating researchers from Chile, Argentina, Brazil, Colombia, Mexico, Peru, Panama, and Ecuador. During 2023, a collaborative paper on Routine Outcome Monitoring in Latin-American psychotherapy practices was prepared for submission. The “Active Ingredients of Change in Transference Focused Psychotherapy” project, which involved Cornell and City University of New York, concluded in 2023, though researchers continue working on a final joint publication.

4. Mindfulness and Other Contemplative Practices

MIDAP has maintained its collaboration with Heidelberg University on mindfulness-related research. In 2023, new publications focused on Forest Bathing and mindfulness interventions for university students.

5. E-Mental Health Research

The Latin American E-Mental Health for Depression network has grown significantly, with key partnerships including institutions from Chile, Colombia, Mexico, Germany, the Netherlands, and the United Kingdom. An ANID-funded project, “International Network for the Fostering and Development of Digital Mental Health” (FOVI220026), led to visits from German and King's College researchers and an international seminar on e-mental health in Santiago in 2023.

MIDAP has also played a pivotal role in developing the Mental Health Information Reporting Assistant (MHIRA) software, now operational in low-resource settings across Basel, Kosovo, and Tanzania. The project's formal introduction in BMC Psychiatry in 2023 highlights its impact.

6. Early Developmental Conditions

The Network for the Study of Emotion Regulation within the Family Context has remained active, with strong collaborations with UC-Davis and the University of Melbourne. In 2023, a doctoral student from UC-Davis conducted a research stay in Chile. Additionally, a new interdisciplinary network on early childhood research—“The Triad”—was launched with USD \$80,000 in funding, involving Universidad Católica (Chile), Tecnológico de Monterrey (Mexico), and Universidad de los Andes (Colombia).

b) Other Collaborative Activities

Longitudinal Studies

MIDAP has deepened its engagement in large-scale longitudinal research. Key partnerships include:

- **Center for Intercultural and Indigenous Studies (CIIR):** Integration of a mental health module in the Longitudinal Survey on Intercultural Relationships (ELRI).
- **Center for the Study of Social Conflict and Cohesion (COES):** Inclusion of a depression and well-being module in the Longitudinal Social Study of Chile (ELSOC).
- **National Longitudinal Survey of Early Childhood (ELPI):** Data collection continued into its fourth wave in 2023, with MIDAP researchers analyzing depression heterogeneity within these datasets.

National and Institutional Partnerships

The collaboration with **MIDE** (Psychology Measurement Center at Universidad Católica de Chile) has yielded major projects assessing student mental health. The largest study to date (2022) involved 9,000 technical university students, and in 2023, the partnership expanded to design and implement a large-scale university-wide well-being and mental health program.

MIDAP researchers continue their involvement in the **Attachment & Adoption Research Network**, which spans 12 countries across four continents, with contributions to joint research and publications.

Community and Public Engagement

In 2023, MIDAP reinforced its commitment to engaging with lived experience groups, particularly **Fundación TLP Chile** (Borderline Personality Disorder) and **Fundación Círculo Polar** (Bipolar Disorder). Collaborative research projects, public health seminars, and community initiatives with these organizations have helped to bridge the gap between academic research and public mental health advocacy.

International Society for the Study of Personality Disorders (ISSPD)

MIDAP has sustained its collaboration with ISSPD, with Dr. Alex Behn serving as Vice-President for the Latin American Group. During 2022 and 2023, efforts were directed toward organizing the ISSPD meetings in Sydney and strengthening Latin-American representation within the organization.

c) Conclusion

Over the four-year period, MIDAP has demonstrated remarkable resilience and adaptability in fostering both national and international collaborations. These efforts have translated into significant research outputs, strengthened partnerships, and impactful public engagement. MIDAP's growing role in global mental health research continues to position it as a leading research institution, contributing to scientific knowledge, training, and policy development in the mental health field.

6. Outreach and connections with public and private sectors

a) Outreach

One of the four **spheres of action** of the centers funded by ANID consists in conveying its findings to the whole community. In this core area of operation, MIDAP has performed superbly: just between 2020 and 2024, it organized 120 communication activities for the general public and multiple specific audiences, and launched 42 products based on findings and advances stemming from the research carried out by the Institute. All these initiatives were financed through annual Outreach grants awarded by Millennium, MIDAP funding, and/or in collaboration with other actors within the science, technology, and innovation system.

Through these efforts, MIDAP consolidated its presence in the scientific, academic, and media domains, actively contributing both to mental health promotion and to the debate on this topic in Chile and Latin America. This continuing focus on scientific communication, combined with permanent social media engagement and the establishment of alliances with key actors in the health care and education sectors, enabled the Institute to broaden its social impact while strengthening its approach and commitment to people's mental well-being.

MIDAP's communication strategies led to an increase in its researchers' presence across all media formats (written, digital, audiovisual); in total, during the period covered by this report, MIDAP members appeared 395 times in the media. These appearances include several interviews with MIDAP experts broadcast as part of *Sana Mente*, a program produced by CNN Chile, as well as their permanent presence in digital outlets such as CIPER, El Mostrador, Cooperativa Ciencia, Emol, Revista Mujer de La Tercera, and El Mercurio's Revista Ya, among others.

The effect of these communication strategies also strengthened MIDAP's presence and visibility on social media. Between 2020 and 2024, the Institute's multiple social media accounts on Instagram, X, Facebook, LinkedIn, and YouTube reached a combined total of 95,452 followers.

In 2020, MIDAP successfully adapted to the challenges stemming from the “social explosion” in Chile and the global COVID-19 pandemic, a health crisis that also affected in-person activities during 2021. Leveraging the fact that this worldwide issue brought to the fore the importance of mental health, the center consolidated its standing as a leading institution in this field both in Chile and Latin America. MIDAP researchers continued to play an active role in leading **scientific communication events**, including the *Festival de las Ciencias* (FECI), organized by the Ministry of Science. This science event, held on-line in 2020 and 2021, consisted in podcast-style interviews shared on the festival's digital platforms, which made it possible to reach parts of the country that had remained unexplored up to that point.

Taking advantage of the pandemic context, several podcasts featuring MIDAP researchers were widely publicized during the FECI, covering topics such as the importance of psychotherapy, of distinguishing our emotions, and of young people's mental health in stressful settings, among others. An interview with the director of MIDAP, Juan Pablo Jiménez, was also

broadcast by radio Universidad de Chile on its program Ciencia para Todos [Science for Everyone], which covered the topic of the *syndemic*: the three-fold social, health, and economic crisis and its effects on mental health. In addition, the festival presented a mini-TED Talk by the Institute's head of research, Alex Behn, which addressed the mental health impact of the social and health crisis with a focus on its effects on Chileans.

MIDAP also launched a new scientific communication program: the *Mentalizar* project, an animated short complemented with freely distributable material that highlights the protective role of mentalization for mental health.

In 2020 and 2021, MIDAP also participated in the Puerto de Ideas Festival in Valparaíso with the on-line conference entitled “From the psychiatrist's couch: Notes on an uncertain Chile”, by Juan Pablo Jiménez, which analyzed the impact of the “social explosion” and the pandemic on mental health, and in the Puerto de Ideas Science Festival in Antofagasta with the on-line talk “From Freud to Zoom, the psychotherapies of the 21st century”, by Alex Behn.

After the social and health crises were overcome, MIDAP continued taking part in both festivals through interactive projects and presentations on mental health and climate change. Likewise, MIDAP presented its findings at other health and mental health fairs, including two versions of the Health Fair organized by the Universidad de Chile, the Women's Health Fair organized in 2023 by the Center for Research on Food Environments and the Prevention of Chronic Diseases Associated with Nutrition (CIAPEC), and the Discovering Knowledge Fair organized by the Universidad de Chile in 2024, which drew approximately 900 attendants.

Regarding its **engagement with national actors** in the science and technology field, the center participated in the Congreso Futuro 2023 through Alex Behn, who addressed the effects of the pandemic on mental health in a talk that has reached 770 views on MIDAP's YouTube channel.

Furthermore, during this period, MIDAP organized multiple **seminars, national workshops, and international conferences**. A noteworthy example of these events was the *International Cycle of Mental Health Conferences: Proposals for Addressing Depression, Suicide, and Other Mental Disorders*, organized in 2020 in collaboration with the Vice-President's Office for Research of the Pontificia Universidad Católica de Chile and Columbia Global Centers - Santiago. The conferences featured several renowned researchers, including PhD. Otto Kernberg, one of the world's leading specialists in the study of personality disorders; Michael Barkham, Jaime Delgadillo, and Lena Verdelli.

The Institute also organized several seminars with guest speakers such as Markus Moessner, MIDAP-affiliated researchers, and other Chilean peers, all of whom covered a variety of topics including challenges in youth mental health, suicide prevention, and digital technologies as a way of reducing gaps in access to mental health care.

After the pandemic, MIDAP resumed its successful **Scientific Coffee Meetings on Mental Health**, organizing four talks for all audiences. Led by five researchers from the Institute, the event covered the topic of postpartum depression in Chile and how to tackle it using digital health care; also, it examined mental health support strategies for caregivers of people with dementia.

MIDAP implemented several new scientific communication initiatives with a focus on prevention and raising awareness of the importance of emotional and physical health. Together with principal investigator Paula Errázuriz and her Master's students, MIDAP launched the mass campaign **¡Cuida tu Salud Mental!** [Take Care of Your Mental Health!], in collaboration with PsiConecta Foundation and UC's School of Psychology, with the support of Metro de Santiago [the capital's subway system]. The campaign was implemented during three consecutive years, with each version covering four different topics. It consisted in an audiovisual intervention -- psycho-educational shorts-- shown in all stations of the Santiago Metro and shared on the digital platforms of the four participating institutions.

The production of digital psycho-educational content emerged as a novel and effective way for MIDAP to cement its position as a source of reliable information based on the latest scientific evidence. Using its own resources as well as Millennium Outreach grants, MIDAP created a variety of audiovisual pieces that have had a major impact in the media and on social networking sites and apps, boosting its status as a leading institution in the mental health field. Among these materials, it is worth highlighting three animation shorts produced during the period covered by this report in collaboration with renowned cartoonist Guillo: *Mental Health*, *Social Upheaval*, and *the Pandemic*, *Mourning During the Pandemic*, and *Community Spirit and Mental Health*, all of which are accessible free of charge for all audiences.

In 2021, MIDAP premiered the first episode of *Salud mental al día* [Mental Health Updates], a bimonthly **podcast** that covers various general interest topics related to mental health through interviews with guest researchers. As of this writing, the show has garnered over 10,000 listens. Also in 2021, MIDAP re-launched its **Information Bulletin**, introducing a more innovative and colorful format to present the Institute's studies and events to over 8,000 contacts.

In digital domain as well, the first episode of *Salud mental al día* [Mental Health Updates] was broadcast by Cooperativa Ciencia, a specialized area of Radio Cooperativa, in December 2024. This weekly **radio program**, focused on scientific discussion and communication, features interviews that are broadcast every Tuesday on Cooperativa Ciencia's website and YouTube channel, and shared on the Institute's social media accounts.

As mentioned earlier, in 2020 and 2021 MIDAP kept a high-profile and constant presence in major media outlets, specifically in three **digital information platforms** with huge audiences: *CIPER Académico*, *Tercera dosis*, and *CIPER+*. During this period, these outlets published 16 opinion columns and three interviews which featured 29 researchers and six students from the Institute. This work was compiled in the book *Salud mental y sociedad en tiempos de crisis* [Mental Health and Society in Times of Crisis], published in digital and print formats. The book was launched in April 2023 before an audience of about 100 people and presented by renowned actors in the fields of public health and the social sciences.

In August 2024, a new book was launched: *Salud mental y psiquiatría en la práctica de Atención Primaria de Salud* [Mental Health and Psychiatry in Primary Health Care Practice], produced by MIDAP and the East Section of the Department of Psychiatry and Mental Health of the Universidad de Chile, and edited by MIDAP former Director Juan Pablo Jiménez and psychiatrists Julia Acuña and Alberto Botto. Across 32 chapters, 60 experts summarize the

state of the art in psychiatry and mental health topics relevant to PHC. With this book, MIDAP makes an effective, material contribution to the daily practice of the diagnosis and management of mental disorders and consultation within the PHC system. Among other authorities, the publication was presented by Andrea Albagli, Undersecretary of Public Health, Ministry of Health, who highlighted a number of passages and chapters from each section of the book.

b) Connections with public and private sectors

Most of the connections established in the last five years have remained active over time, with new ones being generated at multiple levels. Thus, the involvement of MIDAP researchers in several public and private initiatives, either as collaborators, consultants, or service providers, has continued to bolster the status of the Institute as a leader in mental health research in Chile and, in certain areas, also globally. Some of these connections are mentioned below, with the full list being included in Annex 8.

During 2024, MIDAP researchers' connections largely focused on three areas: mental health, personality and mood disorders, and psychotherapy. In this regard, it is worth mentioning the "Fourth Latin American Depression Research Workshop: Emerging Challenges for Latin America", an event that brought together 15 graduate students from Peru, Brazil, Uruguay, Argentina, Colombia, Ecuador, and Chile, and featured the participation of researchers Dr. Andrés Roussos (Principal Investigator CONICET/IPEHCS-UNCO, director of the Laboratory for Research on Psychology and Information and Communication Technologies (LIPSTIC), and Past President of the Society for Psychotherapy Research (SPR), Dr. Clara Paz (academic and researcher from the Universidad de Las Américas in Ecuador, President of the Latin American Chapter of the Society for Psychotherapy research (SPR), and Dr. Daniel Espinosa (academic from the Universidad Nacional de Colombia, Bogotá, Colombia, Adjunct Researcher at MIDAP, and Past President of the Society for Psychotherapy Research (SPR), along with several MIDAP researchers and members of organizations such as Círculo Polar. The purpose of these workshops is to generate advanced human capital for addressing regional and global mental health challenges.

Other important events include training courses organized by MIDAP researchers, aimed at professionals from the fields of mental health, primary health care, and other similar areas, covering topics such as video-feedback and its applications in early childhood interventions and adolescent suicide.

Connections of other types were established through consulting, advisory, or training services, which have become a usual activity for MIDAP both in Chile and abroad. Between 2020 and 2024, MIDAP researchers participated in and contributed to over 130 projects that involved connections with sectors outside the academic sphere. As shown in the following table, several types of connections were generated during this period:

<i>Type of connection</i>	<i>Count</i>	<i>% by column</i>
Advice/Consultancy	38	28.8%
Training	18	13.6%

Collaboration	66	50.0%
Research/Surveys	10	7.6%
TOTAL	132	100%

The above table aggregates local and international connections. These include local consultancy services delivered as part of the Mental Health Advisory Council for Higher Education, developed as public policy proposals or interventions. Likewise, MIDAP researchers joined work groups to compile information and generate proposals, for example, the Technical Cooperation Committee of Centralized and De-centralized Public Institutions, to produce “Dialogues Among Key Actors About the Implementation of Suicide Prevention Strategies” or the “Advisory Committee on Dementia”.

MIDAP researchers have continued to collaborate with a range of institutions and agencies. For example, Mariane Krause and other MIDAP researchers collaborated in the design of a Public Technological Institute for Social Coexistence and Sustainability, whose second phase (implementation) is slated to begin after the completion of the design phase.

In the mental health domain, in 2024, Young Researcher Álvaro Jiménez took part in the launch of a policy brief along with representatives from the Suicide Prevention Program of the Health Ministry (MINSAL, <https://midap.org/investigador-alvaro-jimenez-presenta-policy-brief-de-recomendaciones-para-la-actualizacion-del-programa-nacional-de-prevencion-del-suicidio/>). Summarizing the evidence collected through a study or project on the topic of suicide, this document emerges as a tool that offers a synthesis of the research carried out by a MIDAP group. The text was aimed at political actors and non-specialized audiences, delivering a brief treatment of implementation options, conclusions, and recommendations for informing public policy on suicide prevention.

Regarding universities and research centers, as of 2024, some existing connections have been preserved and new ones have been established. For example, Doctor in Pharmacological Sciences Luis Salazar has continued to collaborate internally with MIDAP from his post at the Universidad de La Frontera. He is principal investigator, coinvestigator, and tutor in more than 70 research projects with different sources of funding (e.g. FONDECYT, Millennium Initiative, FONIS, FONDEF, INNOVA-CORFO, BPST-CONICYT, FAPESP, CNPq, FAPESP-UFRO), working in the area of biotechnology for the last 10 years, receiving over 60 awards for scientific and academic merit, and presenting over 500 conference papers, more than 300 at international conferences. He is also author of over 190 publications in mainstream journals, evaluator of research projects, and referee of various scientific journals. He participates in several institutional bodies at UFRO, including the Committee of Graduate Affairs and Medical Specializations and the Team for Permanent Quality Improvement; furthermore, he is the director of the Doctoral Program in Sciences (Specialization in Applied Cellular and Molecular Biology) and a member of the Advisory Council for the Accreditation of Graduate Programs of the National Accreditation Commission. Dr. Salazar participates in MIDAP's Line of Research 1: Basic bio-psycho-social structures and processes.

Like Dr. Salazar, MIDAP researchers have established relevant connections with public and private bodies in the field of mental health, including primary health care centers, schools,

mutual insurance companies, research or intervention centers in Chile and abroad, ministries, and a wide range of social organizations.

7. Administration and Financial Status

a) Organization and administration:

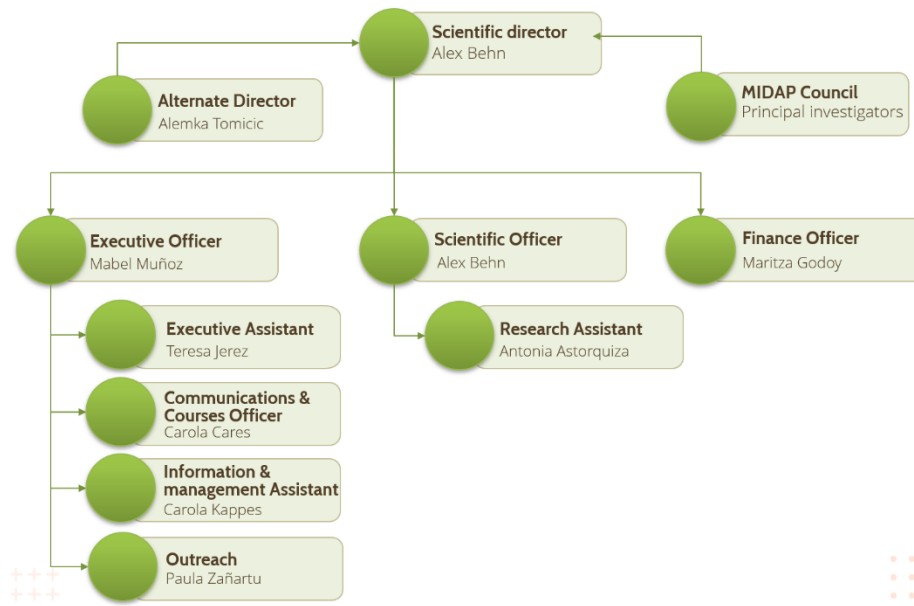

All the administrative tasks and internal meetings of MIDAP Institute continued to be performed remotely throughout 2024, except one day of every week, when the management team met in-person to organize, coordinate, and assess MIDAP's regular and exceptional activities. The Council of Principal and Senior Investigators² holds its meetings on Zoom every two months. As previously noted, the tasks of the Council include organizing and coordinating all the scientific-academic activities of the Institute; actively participating in a variety of research activities held each year; making decisions about the promotion of researchers belonging to the Institute; defining the rules of some internal tenders and selecting their beneficiaries; and making strategic decisions about the research conducted at the Institute, among other tasks. Since 2021, the MIDAP Council has made increasing efforts to define the objectives and goals of the Institute if its funding is renewed for another 10 years through a competitive grant process to be conducted by Milenio-ANID in late 2024, as permitted by the terms and conditions of the original competitive grant awarded to MIDAP.

MIDAP is supported by six Host Universities. These institutions host various research groups, which are associated with the wide range of MIDAP's Lines of Research. The research groups are composed of PI, Senior Researchers, Young Researchers, Collaborative Researchers, Research Assistants, Postdocs, and Undergraduate and Graduate Students. At the heart of MIDAP is a team of professionals who work on daily tasks related to communications, outreach activities, financial administration, data management, supervision of competitive grant applications, and sponsorship of scientific events, among others.

MIDAP's Management Team continued holding weekly internal meetings both remotely and in person. It is worth noting that the make-up of the team has changed relative to last year. Mr. Juan Pablo Jimenez and Mrs. Marcia Olhaberry, Former Scientific Directors, both of whom had been in charge for almost 5 years, resigned in July. Since then, Mr. Alex Behn and Alemka Tomicic, Principal Investigators, have been the new leaders of MIDAP. The current management team is organized as shown in the diagram below.

Figure 1. Organizational structure chart

² Only senior researchers residing in Chile are part of the Council.

As noted above, MIDAP hosts various studies led by a MIDAP researcher in charge of a team composed of other researchers and research assistants, some of whom receive payment through MSI funds for part-time staff. The other research assistants are supported through external funds provided through additional research projects led by MIDAP researchers. Regardless of the origin of the funds that they receive as payment for their work, research assistants are a relevant part of the Institute's community and, as such, they are encouraged to participate in all the research meetings held annually by MIDAP.

MIDAP depends on six Host Institutions (see Introduction). In terms of infrastructure and administrative duties, our Institute primarily relies on the support of UC's School of Psychology (EPUC). General facilities provided by all Host Institutions include workspaces for the researchers and students involved in each project; library services; meeting rooms; clerical assistants; phone and Internet connection; video conferencing equipment; software for quantitative and qualitative statistical analysis; and other general services. During 2024, the collaboration of Universidad Diego Portales and other organizations gained relevance, since they hosted a range of in-person activities organized by MIDAP.

b) Financial Status:

The Institute received the full amount of financial contribution from the MSI for the last five years (2020-2024). The payment came to approximately US\$ 1,533,188, a slightly larger amount in Chilean pesos than the 2014-2019 period, but equivalent to a 15.3% smaller dollar amount. Additionally, the MSI did not contribute to Outreach activities. Despite these economic constraints, we were able to maintain most of the planned activities. MIDAP has continued receiving financial support from ANID (approximately US\$ 272,331), besides other grants from various sources. In 2024, we received another grant of CLP\$10,000,000 (approx. US\$10,893) from the Vice-President's Office for Research of Pontificia Universidad Católica de Chile to support the training of postdoctoral researchers (more details in Section 4). In addition, we received a payment of US\$ 63,028 for a scientific consultancy commissioned by DUOC, as the

consultancy initiated in 2022 continued. Finally, we received an additional US\$ 11,389 from a set of training programs offered annually by MIDAP. Furthermore, we received a donation from Germany which covered the cost of editing Juan Pablo Jiménez's book (EUR 9848.99). The outflow structure for the year 2024 followed the same pattern of past years, with most of the MSI income being spent on researchers' and students' salaries and bonuses, internal research grants, research assistants' salaries, partial support for publications, and increased contributions for attending scientific events, among other expenses.

8. Annexes

Annex 1.- Institute Researchers

1.1.- Summary table of MIDAP researchers (Those who have participated in the reporting period, excluding undergraduate and graduate students).

Researcher category	Amount	Average Age	Nationality		Gender Distribution		
			Chilean	Foreign	Male	Female	Not stated
Director	1	78,9	1	0	1	0	0
Alternate Director	1	55,3	1	0	0	1	0
Principal Researcher (excluding director and alternate director)	15	55,5	15	0	5	10	0
Senior Researcher	6	61	2	4	4	2	0
Adjunct Researcher	30	52,67	24	6	14	16	0
Young Researcher	16	49,35	16	0	8	8	0
Postdoctoral Researcher	4	48.66	3	1	2	2	0
TOTAL	73	58,79	62	11	34	39	0

*As of December 31, 2024, MIDAP had other 80 Research Collaborators actively participating in different studies carried out at the Institute.

1.2.- Principal Researchers (Those who have participated in the reporting period).

1	L1: Basic bio-psycho-social structures and processes.	This line of research focuses on the origins and the mechanisms that trigger, develop, and sustain psychological disorders. It includes the assessment of the multiple cultural, social, developmental and psychobiological conditions involved in depression and personality.	It includes the assessment of the multiple cultural, social, developmental and psychobiological conditions involved in depression and personality. Some topics for specific studies of this line are: - Interaction of cultural, social, and family variables in the prevalence of depressive disorders, suicide risk, and subjective experience of illness. - Confluence of cultural aspects and genetic susceptibilities with personality types and depression in the Chilean population. - Conditions of labor and educational contexts for subjective wellbeing and depression. - Trauma and alterations of early attachment as determinants of depression and personality disorders. - Psychobiological correlates of depressive disorders in interaction with personality types and structures. 5.2.- Short-term Traineeships of MSI students

5.2.1.- Internships abroad of young researchers from the center

Student Name	Institution	Country	Advisor	Project Description	Starting Date	Ending Date
Cecil Mata López	Heidelberg University	Germany	Sabina Pauen	Work on her thesis project of the Doctoral program in Psychotherapy (Universidad de Chile and Pontificia Universidad Católica de Chile), with Dr. Sabina Pauen, co-supervisor of her thesis.	01-08-2019	31-01-2020
Nina Franziska Immel	Witten/Herdecke University	Germany	Christina Hunger-Schoppe	During her internship at Witten/Herdecke University, Nina received top-quality supervision to conduct part of her doctoral project, which consisted in analyzing individual and relational moments of change in video-recorded therapies. During 2021, Nina and her research group conducted interviews with expert psychotherapists to identify relational change indicators. These indicators, along with generic change indicators (Krause et al., 2015), were applied to systemic therapies to analyze the course of relational changes and their association with therapeutic outcomes. Said therapies belong to the SOPHO-ST/CBT project (Hunger et al., 2020) and were conducted in German. To analyze these therapies, Nina trained a group of Master's students in the identification of (generic and relational) change moments and led this study under the supervision of Dr. Hunger-Schoppe, her co-tutor and an expert in multi-personal therapeutic processes. Nina benefited from personalized supervision sessions with Dr. Hunger-Schoppe, which helped her to conduct her research project. She also worked with Dr. Hunger-Schoppe's team on other studies carried out by the department, thus strengthening the collaboration between the Universidad Católica de Chile and Witten/Herdecke University with a view to undertaking future projects. Through her thesis project, Nina made	01-03-2022	30-09-2022

				a significant contribution to research on psychotherapeutic processes, which is part of MIDAP's line of research no. 3. Activities conducted during the internship: Training of the research team in the identification of (generic and interpersonal) change moments: March 2022. Analysis of video-recorded systemic therapies (approximately 15 therapies, 26 hours of therapy each): April-August 2022. Analysis of results and preparation of an article: September 2022. Participation in other studies conducted by the research team: March-September 2022. Congress of the German Psychological Society: June 7-11, 2022 Agreed-upon products of the internship: Thesis project; Scientific article; Presentation at an international conference		
Mahaira Reinel Pineda	Adelphi University and Mount Sinai Beth Israel	USA	John Christopher Muran	The objective of the internship was to contribute to the line of research entitled "Psychotherapeutic Interventions and Change Processes" (MIDAP's line of research no. 3). The student received information and participated in the ongoing research projects led by Dr. Muran, while at the same time receiving methodological and conceptual supervision for her own research project. Activities conducted: Training in the model of therapeutic alliance ruptures and resolutions. Introduction of changes and improvements to the model based on the results of the research conducted by Dr. Muran and his team. March-April 2022. Observation of clinical sessions. Identification of episodes of rupture and resolution of the therapeutic alliance. April-June 2022. Analysis of the integration of mindfulness as a	19-03-2022	20-06-2022

				therapist skill for rupture resolution: Task Analysis. March-June 2022. Participation in other studies conducted by the research team. March-June 2022. Analysis of results and preparation of an article. April-June 2022. Agreed-upon products of the internship: Thesis project: Scientific article; Presentation at an international conference		
Pamela Verónica Franco Vivanco	Vrije Universiteit Amsterdam	The Netherlands	Pim Cuijpers	Pamela's thesis research consisted in the generation of an Internet-based intervention aimed at preventing postpartum depression, whose feasibility and acceptability she subsequently studied. Throughout the intervention, Pamela followed the model created at the eHealth Research Center of the University of Twente (van Gemert-Pijnen et al., 2011), whose steps are focused on the user. This model seeks to generate a culturally-aware intervention capable of promoting adherence and yielding guidelines for a subsequent large-scale randomized clinical trial. To contribute to the fulfillment of her doctoral thesis, Pamela applied for and secured an international internship at the Vrije Universiteit Amsterdam in the Netherlands. There, she worked under the supervision of Professor Dr. Pim Cuijpers, who heads the Depression Research and Treatment Program at the Faculty of Psychology. In addition to being a member of Pamela's doctoral committee, Dr. Pim Cuijpers specializes in randomized clinical trials for the prevention of depression and anxiety, which will enable him to make a major contribution to Pamela's research, particularly at a methodological level. Pamela's presence in Dr. Cuijpers' laboratory also allowed her to participate in the production and publication of a meta-analytic study alongside Dr. Cuijpers' team, a process that resulted in international collaboration networks that may benefit other MIDAP researchers in the future. During her internship, in May 2022, Pamela also participated in the annual "Supporting Health by Technology"	02-04-2022	30-07-2022

				conference, organized by the University of Twente. On this occasion, she detailed the progress of her intervention, thus expanding the reach of her findings as a MIDAP Doctoral researcher.		
Catalina Andrea Núñez Barraza	Psychotherapy Evaluation and Research Lab at Sheffield (PEARLS), de la Universidad de Sheffield	UK	Michael Barkham y Jaime Delgadillo	The thesis project seeks to study the heterogeneity of depression from a symptomatological point of view using network analysis. Furthermore, the identification of the way in which symptoms relate to one another in each depression profile can shed light on the main intervention objectives and treatment personalization. This internship is associated with the collaboration project of the International Network for the Study of the Heterogeneity of Depression PCI REDES180104.	15-02- 2023	15-08- 2023
Stephanie Vaccarezza Schürmann	Clinical Psychology and Psychotherapy Division, Department of Psychology , University of Trier	Germany	Wolfgang Lutz	The main objective of the internship is to develop scientific competences linked to the design of clinical psychology and psychotherapy studies and to the advanced quantitative data analysis. The student will get the opportunity to learn about the Trier Treatment Navigator, a digital navigation system based on machine learning designed to develop practical guidelines grounded in empirical data, select an optimum treatment strategy, predict drop-out risk, and follow-up patients' suicide risk and the progress of their psychotherapeutic treatment. This program was created by Wolfgang Lutz and his research team to promote clinical practice based on scientific evidence.	15-03- 2023	15-08- 2023
Antonella Davanzo Baros	Center for Psychotherapy Research (FOST), Universidad	Germany	Markus Moessner	The thesis project is led by MIDAP's head of research, Alex Behn, and seeks to study and establish optimum calibration parameters for the frequency of messages sent by the tool Ecological Momentary Assessment (EMA) for the study of BPD. This study is also part of the project "Using	31-05- 2023	31-08- 2023

	de Heidelberg			Technology to facilitate international Research on diagnosis and treatment of BPD in adolescence, including low-and middle income countries - a strategy based on direct Clinical benefits”, led by A. Behn.		
Nicolás Labbé Arocca	Center for Psychotherapy Research (FOST), Universidad de Heidelberg	Germany	Stephanie Bauer	The thesis project seeks to design a personalized psycho-educational intervention focused on Borderline Personality Disorder (BPD) using evidence-based intervention planning models. Also, it seeks to foster the capacities of mental health professionals who, despite not necessarily having specialized in working with these patients, must still treat them.	02-06-2023	28-08-2023
Sofía Fernández Sanz	Anna Freud Centre for Children and Families de la University College London	UK	Nick Midgley	The project seeks to improve the quality of the interventions offered to children and adolescents who have suffered sexual abuse; also, it is an attempt to strengthen research and obtain solid evidence about the relevant factors associated with psychotherapeutic change in young people. Therefore, this thesis project should contribute to MIDAP's line of research entitled “Psychotherapeutic interventions and change processes”. Furthermore, since sexual abuse experiences have been linked to the development of future mental health problems of issues such as depression, research focused on learning about and improving interventions for child victims of sexual abuse should help to change the early conditions that may lead to the emergence of future mental health disorders, thus contributing to the line of research entitled “Health promotion and psychosocial prevention”.	11-09-2023	31-12-2023
Daniela Lira Ampuero	Clínica Universitaria de la Universidad de Heidelberg	Germany	Stephanie Bauer	Trabajo en proyecto de tesis doctoral, sumado a reuniones de investigación relativas a los diversos proyectos llevados a cabo en el FOST.	13-10-2023	31-01-2024

Betzabé Carolina Torres Cortés	Harvard University - Massachusetts General Hospital	USA	Katia Canenguez	Diseñar e implementación un programa de educación sexual comprehensivo con enfoque género-transformador y abordaje de la salud mental, para evaluar su aceptabilidad/factibilidad y comprender cómo su implementación incide en la equidad de género en salud y en la salud mental de sus participantes.	29-11-2023	26-02-2024
Catalina Andrea Núñez Barraza	Universidad de Zurich	Switzerland	Prof. Brigit Watzke	En el marco del proyecto de colaboración International Network for the Study of the Heterogeneity of Depression, Catalina fue invitada a realizar una pasantía con el equipo de investigación en psicoterapia y psicología clínica de la Universidad de Zürich, colaborando durante su pasantía en el proyecto NaTel, estudio clínico randomizado (RCT) que evalúa la eficacia y efectividad de una intervención digital de after care para pacientes con depresión crónica en Alemania y Suiza.	01-12-2023	29-02-2024

Student	Laura Sicilia Matas	PhD	University of Barcelona	Instituto Milenio para la Investigación en Depresión y Personalidad, MIDAP	Brazil	Laura Sicilia completed a doctoral internship with the research team led by Claudia Capella at the Psychology Department of the Universidad de Chile. The research team conducts studies on how children and adolescent victims of sexual assault can overcome psychological issues through psychotherapy, encompassing topics associated with sexual victimization in childhood. These include the overcoming of sexual assault experiences in childhood, with a focus on the psychotherapeutic intervention processes of children and adolescents and their families. The research team has generally used qualitative methodologies, from a narrative perspective, and –more recently– mixed methods. Considering the line of research to which it belongs, Laura's thesis work on post-traumatic growth in survivors of child sexual abuse was of particular interest to the research team. Furthermore, she is using mixed methods in her research. During her internship, Laura took part in several activities: - Training opportunities provided by the research team: periodic meetings to discuss the progress of the team's research, prepare	01-04-2022	30-06-2022

Intern Type	Intern Name	Academic Degree	Home Institution	Destination Institution	Country	Project Description	Starting Date	Ending Date
						fieldwork and analysis, and discuss thesis projects related to the larger research project; and meetings held by the doctoral researchers to discuss and share their research processes and encourage collaborative learning. - A course entitled “Qualitative Methodology Workshop”, taught by Claudia Capella, for students enrolled in the Doctoral Program in Psychotherapy of the Universidad de Chile (offered jointly with the Pontificia Universidad Católica de Chile). As part of this course, Laura produced a paper with the qualitative results of her thesis. - Training and supervision meetings with the professor in charge of her internship, where they discussed how qualitative and narrative data analysis have been used in studies on child-adolescent sexual assault. This greatly bolstered Laura's competences and knowledge throughout her thesis research and production process. Furthermore, this joint work allowed Laura and her supervisor to identify new common Lines of Research and outline future collaboration opportunities.

2024	Consortio Latinoamericano de Investigación en Psicoterapia	Promover y generar asociatividad entre investigadores y centros de distintos países de Latinoamérica para establecer un marco común para la recolección estandarizada de información clínica en la práctica habitual.	Los investigadores del Capítulo Latinoamericano de la SPR, en la 50ª reunión internacional de la SPR en Buenos Aires en 2019, comenzaron a generar ideas para colaborar. Muchos de estos miembros se unieron a la Red Latinoamericana Psicoterapia y Cambio para este propósito. En 2023, esta red propuso una serie de reuniones virtuales para conocer las investigaciones realizadas por sus	Centro psicológico (CEPS) UAH, Chile; Centro de Psicología aplicada, Universidad de las Américas, Ecuador; Servicio de atención psicológica, Universidad Nacional, Colombia; Maestría en Intervención Clínica	6	1			2, Publicaciones científicas, Presentaciones en congresos, divulgación	Carolina Altimir. 			miembros. En una de estas reuniones, se propuso el tema de Monitoreo de Resultados y generación de Evidencia Basada en la Práctica (PBE). Varios miembros expresaron entusiasmo por generar este tipo de evidencia y, como resultado, se propuso una serie de reuniones posteriores para explorar las posibilidades de generar PBE en América Latina. A partir de estas reuniones, se formó un grupo de trabajo con investigadores de siete países de la región. 2020	Artículo	Artículo/ entrevista "Las mujeres pobres concentran la sintomatología depresiva en Chile".	La investigadora del Instituto, y miembro del Consejo de MIDAP, Mariane Krause, fue entrevistada en CIPER Académico a raíz de sus investigaciones sobre la relación entre pobreza y depresión en las mujeres. En el artículo se refiere al acceso al tratamiento, las barreras que impiden a las mujeres recibir la atención que necesitan y las razones que explican por qué las mujeres, y sobre todo aquellas con menores recursos, son las que más registran síntomas depresivos o depresión. Asimismo, habla sobre la relevancia y el aporte del movimiento feminista en la salud mental de las mujeres.		Internacional

2024	Otra	Libro “Salud mental y psiquiatría en la práctica de Atención Primaria de Salud”	La edición y publicación en formato digital e impreso del libro “Salud mental y psiquiatría en la práctica de Atención Primaria de Salud” se realizó en gran parte gracias a los fondos recibidos del concurso de PME 2022-2023, lo que se sumó al aporte del Departamento de Psiquiatría y Salud Mental de la Facultad de Medicina, Campus Oriente, de la Universidad de Chile. Sin embargo, el retraso en este último financiamiento, nos obligó a solicitar la extensión de la ejecución de este producto que estaba comprometida como fecha tope el 24 de octubre de 2023, por tres meses, lo que aplazó la edición y publicación de este libro las que se concretaron finalmente el 24 de enero de 2024. Esta publicación resume el conocimiento actual de la psiquiatría y temas de salud mental relevantes para la Atención Primaria de Salud (APS) y está destinada a ser usada por los profesionales que trabajan en el nivel de la APS y que durante su práctica diaria se ven enfrentados a problemas de salud mental y a cuadros clínico-psiquiátricos que exigen capacidad diagnóstica y resolutiva.	Docentes universitarios. Estudiantes de postgrado. Profesionales de otras áreas. Profesionales del área del centro. Público general. Sector privado.	Internacional

Annex 10.- Outstanding Activities

No additional activities are reported in this section. All relevant and outstanding activities have reported elsewhere

Year	Name of the activity relevant in your discipline	Type of activity relevant in your discipline carried out	Description of the relevant activity in your discipline	Importance in your discipline of the activity	Possibility to maintain or replicate this activity

Annex 11.- Negative or positive aspects that you would like to address in order to understand the context in which the center developed its work during the reported period.

Negative or positive aspects that you would like to address in order to understand the context in which the center developed its work during the reported period.

Relevant Positive and Negative Aspects
a. Investigación científica Over the years, MIDAP has grown to involve a significant proportion of mental health researchers in Chile. Our significant research output has been contingent on bringing together this outstanding group of researchers. However, as one of the first Millennium Institutes in Social Sciences, funding was, from the beginning, significantly lower than funding for Institutes in the Exact Sciences. There is absolutely no scientific justification for this difference. In addition, MIDAP's budget is stable across time, and is not adjusted for inflation which is, of course significant over a 10-year time span. As a result, after operational costs are covered (barely as years pass) PI's do not have dedicated funding for research. Thus, researchers have to apply for external research money (e.g. FONDECYT). Our team of scientists has been quite successful in securing these funds, but truly, the first Social Sciences Institutes have been completely underfunded in terms of funds for science. In other words, we had two choices: one was to have a very small center with very few researchers how do have specific funds to conduct very specific research, exactly mapped on our Lines of Research. Under this model, we would not have been able to produce all the research we have produce, train all the students we have, etc. The other model was to think of

a large Institute as an umbrella that creates a thriving ecosystem of researchers pursuing their own scientific goals and applying for external funds, facilitating exchanges, a science of directional supporting some travel funds, organizing seminars, workshops, and ensuring adequate outreach and impact. We have been very successful pursuing this model.

b. Formación de jóvenes

Over the years, MIDAP has been very successful training young scientists. This is likely because as a large institute, spanning six hosting institutions our researchers are involved as faculty in undergraduate, masters and doctoral programs. Unfortunately, given our funding constraints little support funds have been available to sustain dedicated graduate students.

c. Actividades de extension

Outreach has been at the center of our activity as we have strived to project our work to the community, lived experience, decision-makers, and different stakeholders. Because of funding constraints we were not allowed to apply for outreach funds (PME) on several years, where only newer Institutes were allowed to apply. This meant that we had to support outreach with our own regular funds (not adjusted for inflation). Objectively MIDAP has been very successful in its outreach activities, and when these structural funding constraints are considered, this success is even more noteworthy.

d. Redes de colaboración

After 10 years of operation MIDAP is well connected internationally, with valuable and sustainable formal collaborations and a regional leader and referent in Latin-America.

Summary

In summary, funding constraints have been the main problem over the years, which originate in two structural problems: 1) an unnecessary and unfair difference between funding amounts for social sciences and exact and natural sciences, and 2) funds that are not adjusted for inflation, which for centers that last a decade is, of course not a very good model. MIDAP receives around 280 million pesos yearly. In 2024, compared to 10 years has a purchasing power of 170 million Chilean pesos.

Conduct a SWOT analysis (Strength, Weaknesses, Opportunities, Threats and Weaknesses) of the center during the period of execution to be reported.

Strengths:

1. Solid experience of the administrative team.

2. Consistent and transparent financial processes.
3. Ability to attract resources through consultancy services and tenders.
4. Broad team of researchers distributed across 6 host universities.
5. Operations in universities with well-established undergraduate and graduate programs.
6. Major role in the training of graduate students and knowledge transfer.
7. Solid reputation as a knowledge generator and training center.
8. Strong international scientific collaboration networks.

Opportunities:

1. More public awareness of mental health in Chile.
2. Development of telemedicine and technologies for mental well-being.
3. State funding instruments to ensure the Institute's continuity.
4. Digital tools that foster scientific collaboration.
5. Research funding instruments available in Chile.

Weaknesses:

1. Limited funding for research projects.
2. Variability in the interaction with the host universities.
3. Limited availability of researchers due to their academic posts.
4. Lack of suitable infrastructure for physical storage.

Weaknesses:

1. Limited funding for research projects.
2. Variability in the interaction with the host universities.
3. Limited availability of researchers due to their academic posts.
4. Lack of suitable infrastructure for physical storage.

Threats:

1. Non-inflation-adjusted funding model.
2. Difficulties in the financial administration of projects carried out with ANID.
3. Frequent changes in funding application rules and procedures.
4. Short and variable periods to apply for complementary projects or grants.
5. Cumbersome and outdated information management systems

Threats:

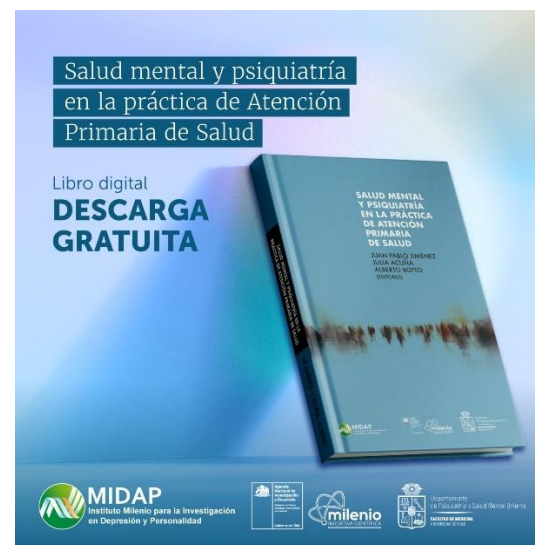

1. Non-inflation-adjusted funding model.

2. Difficulties in the financial administration of projects carried out with ANID.
3. Frequent changes in funding application rules and procedures.
4. Short and variable periods to apply for complementary projects or grants.
5. Cumbersome and outdated information management systems

Annex 12.- Relevant materials, products and activities carried out by the center

12.1 Launching of the book "Mental Health and Psychiatry in the Primary Health Care Practice". August, 2024

In March 2024, the book "Mental Health and Psychiatry in Primary Health Care Practice", a publication developed by the MIDAP Institute and the Department of Psychiatry and Mental Health East of the Faculty of Medicine of the University of Chile, was published in digital format and free of charge. It is intended to be used by professionals who work at the Primary Health Care (PHC) level and who, during their daily practice, are confronted with mental health problems and clinical-psychiatric conditions that require diagnostic and resolution capacity. The book was edited by psychiatrists Juan Pablo Jiménez, former director of MIDAP; Julia Acuña, and Alberto Botto, young researcher. This book is a MIDAP activity within the Projection to the External Environment (PME) 2022 initiative funded by the Millennium Program of the National Agency for Research and Development (ANID).

12.2 MIDAP program at Cooperativa Ciencia

On Tuesday, December 17, the first episode of "Salud mental al día", MIDAP's program of conversation and dissemination in Cooperativa Ciencia, a specialized area of Radio Cooperativa, was broadcasted. The interviews are broadcast every Tuesday of December, as well as in January, March and April (2025), on the website of Cooperativa Ciencia and its Youtube channel, in addition to MIDAP's Youtube channel.

Alex Behn, director & Principal Researcher in the first program. December 17th, 2024

Alemka Tomicic, Principal Researcher. December 24th, 2024.

María Pía Santelices, Principal Researcher. January, 2024

Alexies Dagnino, Adjunct Researcher December 24 th, 2024.

Claudia Miranda, Principal Researcher. January 17th, 2024

Ana María Gallardo, Collaborating Researcher, & Jorge Lira, Radio Cooperativa announcer. December 24 th, 2024.

12.3 Scientific Coffee at Universidad de Valparaíso. November, 29th, 2024

The scientific coffee "Postpartum depression in Chile: context and approach from digital health" was held at the Centro Integral de Atención al Estudiante - CIAE, of the Universidad de Valparaíso, partner university of MIDAP, by Marcia Olhaberry, deputy director of MIDAP, UC academic and researcher in early childhood, and Pamela Franco, postdoctoral fellow of MIDAP, undergraduate teacher in Psychology and researcher responsible for the project "Mom, I understand you". They were accompanied by Dr. Fanny Leyton, psychiatrist, MIDAP collaborating researcher and academic at the University of Valparaíso. This presentation addressed postpartum depression and its main characteristics, such as that it occurs during the puerperium and can be detected from the fourth week after childbirth. The highest rates of PPD occur around 12 weeks postpartum, and is characterized by easy crying, irritability, feelings of guilt, rejection of the baby or of taking care of it, loss of sexual desire and, in the most severe cases, psychotic symptoms and suicidal ideation. The researchers also presented on the vulnerabilities generated by maternal depression in children, and their forms of treatment, as well as digital and online interventions for PPD developed in Chile.

12.4 Scientific Café UDD. November 27th, 2024

The first scientific coffee was held at the Universidad del Desarrollo, one of MIDAP's partner institutions, entitled "Words that welcome and guide: Experience of a program for the prevention of postpartum depression (PPD)"; by Carola Perez, researcher at the Instituto de Bienestar Socioemocional - IBEM (UDD) and principal investigator of MIDAP; Olga Fernandez, professor at the Department of Psychiatry and Mental Health of Children and Adolescents at the University of Chile, and adjunct researcher at MIDAP; and Soledad Coo, researcher at the Instituto de Bienestar Socioemocional - IBEM (UDD).

The researchers presented the psychoeducational intervention "What were we thinking", to prevent anxious and depressive symptomatology in new mothers in the postpartum period, with babies from six to eight weeks old, and aimed at intervening in modifiable risk factors for the development of PPD. The digital mental health intervention consists of 14 modules with educational and reflective content, contact with a trained facilitator via whatsapp (psychologist, psychiatrist or social worker), in addition to a group instance via zoom. This study was conducted between April 2020 and September 2021.

12.5 IV Latin American Workshop. November 11 - 15, 2024

The IV Latin American Workshop on Depression Research, organized by MIDAP, was held at the Faculty of Social Sciences of the Catholic University. The objective of the Latin American workshops given by MIDAP is to train advanced human capital to face regional and global challenges in mental health. In its three previous versions, a total of 59 students from nine countries in the region participated.

In this fourth version, MIDAP received 15 graduate students from Peru, Brazil, Uruguay, Argentina, Colombia, Ecuador and Chile, and counted with the participation of international researchers Dr. Andrés Roussos (Senior Researcher CONICET/IPEHCS-UNCO, Director of the Laboratory for Research in Psychology and Information and Communication Technologies (LIPSTIC), Past President of the Society for Psychotherapy Research -SPR), Dra. Clara Paz (academic and researcher at Universidad de Las Américas, Ecuador, President of the Latin American Chapter of the Society for Psychotherapy Research -SPR), and Dr. Daniel Espinosa (academic at Universidad Nacional de Colombia, Bogotá, Colombia, Associate Researcher at MIDAP, Past President of the Society for Psychotherapy Research -SPR), as well as researchers from MIDAP and members of organizations such as Círculo Polar.

12.6 Presentation of MIDAP Polar Circle research results. October, 2024

On Saturday, October 19, in the Domingo Asún auditorium of the Faculty of Psychology of the Diego Portales University, the activity celebrating the fifth anniversary of the Polar Circle Foundation, an organization of relatives and patients with bipolar disorder, which emerged at the end of 2018 with the support of SOCHITAB, was held.

On this occasion, Principal Investigator Alemka Tomicic and Junior Researcher Javiera Duarte, presented the results of the study "Effectiveness of a peer support intervention for bipolar disorder in Chile: Qualitative analysis of the experiences of peer-supporters and supporteis", one of MIDAP's Priority Research Projects (FIP), and which was developed in conjunction with members of the Polar Circle Foundation, considered "experts by experience".

12.7 Extended meeting with Chris Evans and Clara Paz. June, 2024

Both Chris Evans and Clara Paz participated in the MIDAP Extended Meeting, which had as its theme: "The challenge of implementing outcome monitoring in routine practice in mental health: CORE-OM in international and local experience". Chris Evans presented "Challenges in the globalization of an outcome measure" and Clara Paz, "Call to implement outcome monitoring in health systems and LATAM network". Antonia Errázuriz, Guillermo de la Parra and Patricio Galaz, presented "Local evidence in CORE-OM/implementation". "There was a very rich discussion and the foreign guests were very impressed by MIDAP's productivity, ours as a team and the thoroughness in the validation of the instrument," said Dr. de la Parra.

12.8 Extended meeting with public health expert Jaime Delgadillo. August, 2024

On Tuesday, August 6, the Extraordinary Extended Meeting of MIDAP was held in the context of the visit to Chile of Jaime Delgadillo, PhD, Professor of Clinical Psychology at the University of Sheffield, England; Director of Research in Psychological Therapies at the Rotherham Doncaster and South Humber (RDaSH) NHS Foundation Trust. This meeting was held in the Juan de Castro auditorium of the School of Psychology UC, and was attended, in addition to MIDAP researchers, master's and doctoral students UC.

In this meeting, he presented: "Personalization of psychotherapy based on routine monitoring", where he gave an account of the work done in the public health system in England, and how an idea must go through different types of trials and tests before being implemented on a large scale. In his talk, he presented the work of Michael J. Lambert (Brigham Young University, USA), whose research in psychotherapy led to the development of routine outcome monitoring.

12.9 Seminar “Mental health of higher education students can technology help”. June, 2024.

Within the framework of the project: International Network for the Strengthening and Development of Digital Mental Health, FOVI220026, led by Associate Researcher Graciela Rojas, and Junior Researcher Álvaro Jiménez, the seminar "Mental health of higher education students: can technology help?" will be held.

The project "International Network for the Strengthening and Development of Digital Mental Health" was presented by MIDAP, and its objective is to strengthen and develop an international network in digital mental health (SMD) that contributes to the reduction of existing gaps in prevention, detection and treatment of mental health problems, considering a transdisciplinary approach and the contextual relevance of interventions. This initiative continues the work carried out by the E-Mental Health network: New Information Technologies in Mental Health (PCI REDES150005), funded through the International Cooperation Program of CONICYT, currently ANID.

The MIDAP researchers Álvaro Langer, Vania Martínez, Natalia Salinas, Manuel Ortiz, Carola Pérez, Steffanie Bauer and Daniel Espinosa, together with Ángel Jiménez (ISCI), Soledad Coe (UDD), and the international researchers Ricardo Araya (National Prize for Applied and Technological Sciences 2022), Markus Moessner, Pim Cuijpers and Francisco Diez Canseco also participate as associates.

12.10 Suicide risk workshop. May, 2024.

The Millennium Institute for Research in Depression and Personality - MIDAP - offers this face-to-face workshop designed especially for these professionals. It will be a space in which clinicians will have the opportunity to share what working with people at risk of suicide evokes. This implies getting in touch and sharing the anxieties, uncertainties and concerns that are mobilized in the face of this risk, focusing mainly on the person of the therapist. The scope and limits of the therapeutic action, its responsibilities and degree of involvement will be discussed. At the same time, ways of dealing with these emotions, experiences and thoughts will be co-constructed, favoring the development of an empathic, supportive and effective therapeutic attitude. This will be done through experiential and participatory activities, also addressing theoretical content such as suicide risk factors, protective factors, warning signs, ways to inquire about this particular risk, and the design of a safety plan with the patient.
